13. ABSTRACT (Maximum 200 Words) The goal of this program is to develop and recommend a model of care that enhances the quality of life for DOD children with life-threatening conditions and their families. Our strategy is to maximize current benefits and coordinate medical care with existing community resources and services, tailored to support the family's specified needs and requirements. The first year of work focused on a feasibility study to gather data on the intent, interpretation and implementation of the benefit; status of service delivery; available resources through the Military Health System, contract providers, community and other government agencies; and to conduct an assessment of needs of families. A distinct research protocol was designed to use individual interviews and focus groups to determine family and provider needs. The benefits likely to be used by military families and their children were analyzed. A data assessment collection tool has been designed to capture descriptors regarding community resources. The plan is to web enable the database in order to provide maximum availability and accessibility to the various potential users. An existing education curriculum for providers, Initiative for Pediatric Palliative Care, developed by the Education Development Center, was selected as one that best aligns with the CHI PACC® model.

INTRODUCTION:

The focus of this project is to conduct a feasibility study to explore how pediatric palliative care has been implemented in the medical community, particularly through the use of Medicaid waivers and the application of the principles promoted under the Children's Hospice International Program of All Inclusive Care (CHI PACC®) goals and standards; to identify and analyze issues relevant to providing pediatric palliative care within the Department of Defense (DoD) Military Health System (MHS); and to make recommendations and provide strategies for implementation of such a program that would enhance the quality of life for these children with life-threatening conditions and their families. This program model will be designed to integrate palliative care interventions with therapeutic approaches to disease management from the time of diagnosis and to provide a smooth transition to hospice care when the child and family is ready to make that choice. The strategy is to maximize current benefits and coordinate medical care with existing military and community resources and services, tailored to support the child's and family's specified needs. Clear identification of required resources and services that are not available will allow the model to focus on requirements that are unmet. The first and second years of work have concentrated on an assessment of needs as perceived by families and healthcare providers in the MHS; an analysis of the benefit and the current status of service delivery as it relates to the goals and principles of pediatric palliative care; and the available resources through the MHS, TRICARE managed care support contract providers and services, and resources through the community and other federal, state and local government agencies. Steps have been taken to ascertain the key aspects of a pediatric palliative care plan that provides important elements of such a program, primarily coordination, continuity and a continuum of care, and that would be feasible and achievable within the existing benefit and structure of the MHS. This report will discuss the findings to date and outline the remaining aspects of research and analysis needed to make recommendations, implement a pilot project, and develop appropriate outcome measures that would evaluate the cost and effectiveness of the program.

BODY: Research accomplishments related to objectives in the Statement of Work.

USUHS research regarding needs assessment

Relevant objective in SOW: Objectives 1 & 2 (FY 03 proposal), Objective 1 (FY 04 proposal)

To date, four sites have given full Institutional Review Board (IRB) approval for family and provider needs assessment focus groups and interviews. Recruitment and interviews have begun for families and providers from each of these sites. (Appendix 1)

Needs assessment: Advisory groups

Relevant objective in SOW: Objective 1(FY 03 proposal), Objective 1 (FY04 proposal)

Parents invited to participate in the advisory group have been part of a similar group format for a previous study. Family members have been recruited from a group of parents of children who are currently ill with a life threatening illness, who have recovered from their illness or who have died from their disease. Their role in this project is to serve as research collaborators in a parent

advisory group that will review focus group and interview questions for use with newly recruited parents and health care providers and to adapt a quality of life survey for caregivers for use with this population. The purpose of their input is to insure that the data collected from families through the focus group or interview process will accurately reflect their varied experiences. In the future, the advisory group will assist in the interpretation of study data and the development of models for care delivery and a program evaluation tool. As the project progresses, additional parents, who have participated in needs assessment focus groups and interviews, may also be invited to join the advisory group.

Three advisory group meetings have been held to date. The first meeting served to familiarize the parents with the project and their roles as research advisors. The parents each shared their children's stories. Each story provided an insight into the needs of these families and the difficulties they face as they struggle with the child's medical condition and traverse the military health system. These needs were then analyzed and developed into themes. The group then discussed the Himelstein definitions of disease trajectories and determined which category was relevant to their child. (Discussion of these categories can be found under eligibility criteria.) A Tentative Schematic Diagram of Care (Appendix 2) was presented for the group's evaluation and the parents provided input related to the major challenges that they faced in relation to the diagram of care. They also provided guidance on how to talk with parents about their experiences with a child with a life-threatening condition in a sensitive and respectful way.

The second advisory group meeting discussed the list of themes that resulted from the parents' stories from the first advisory group to give the parents a chance to examine and revise the themes. The major focus of the second meeting was the TRICARE benefit summary (Appendix 3). Parents were asked how they were able to access the services provided by TRICARE, what barriers they have faced in getting the care that their child needed, and what methods or strategies helped improve access to care. Combining these issues with proposed discussion points from the first meeting, the parents crafted questions for use with the parent focus groups and interviews that would help achieve a thorough understanding of the needs of the families while also being sensitive to the difficult issues being discussed.

Quality of Life Survey

The goal of the third advisory group meeting was to introduce and adapt the quality of life survey for use in this project. (Appendix 4) The survey was originally written for children with developmental delays and was designed to measure the quality of life of caregivers. Adaptations were necessary in order to focus this survey on a population of children with life-threatening conditions and their families. The survey was designed to function both as a guide for data collection during the interviews and focus groups as well as a quality measure for any future demonstration program. During the third advisory group meeting, parents were asked to provide comments and suggestions on how to adapt the survey. After being introduced to the concept of quality of life, parents reviewed the questions of the survey and helped to develop and modify categories to describe the major topics. The parents identified missing concepts, agreed on the major thematic categories of the questions, and identified questions for exclusion.

In addition to the advisory group input on the survey tool, a graduate student conducted a statistical analysis on the survey using data previously collected from a study on early intervention programs. The main finding from the analysis was that the survey had strong internal consistency and served as a robust measure of quality of life. The analysis indicated two major themes related to the role of the parents and the access to care. The work also determined that six of the questions were redundant or produced inconsistent results, indicating that minor revisions were necessary. Using the recommendations from both the advisory groups and the work done by the graduate student, the quality of life survey will be adapted for use with families in this project.

Needs Assessment: Parent Groups

Relevant objective in SOW: Objective 1 (FY03 proposal), Objective 1 (FY04 proposal)

The recruitment of parents and the scheduling of interviews are on-going. The group of currently enrolled parents has representation from all major military service branches, both officer and enlisted, and from various racial and ethnic backgrounds. The children of the enrolled parents ranged in age from 4 to 17 years and have either died or were actively involved in treatment for their disease. The diagnoses cover a wide variety of disease trajectories encompassing all four Himmelstein categories. The description of the parent groups will be discussed with the research team to determine whether they reflect sufficient diversity.

Analysis of the transcripts from the interviews has yielded a preliminary list of themes which has begun to identify the needs of families and the difficulties they face. (Appendix 5) The following major categories of themes are based on a qualitative analysis of 5 transcripts (2 focus groups and three interviews representing 8 parents):

<ul style="list-style-type: none"> • Access to existing health care and other services 	<ul style="list-style-type: none"> • Seeking meaning
<ul style="list-style-type: none"> • Relationships and communication with health care providers 	<ul style="list-style-type: none"> • Parents' roles
<ul style="list-style-type: none"> • Emotional toll on child, parents, and family 	<ul style="list-style-type: none"> • Palliative care
<ul style="list-style-type: none"> • Military issues 	<ul style="list-style-type: none"> • Mental health
<ul style="list-style-type: none"> • Need care for survivors 	<ul style="list-style-type: none"> • Care coordination

<ul style="list-style-type: none"> • Decision-making 	<ul style="list-style-type: none"> • Respite care

Needs Assessment: Health Care Providers

Relevant objective in SOW: Objective 2 (FY03 proposal), Objective 1 (FY04 proposal)

Interviews have been conducted with eleven health care providers from various disciplines and departments. The participants included pediatricians, pediatric subspecialists, neonatology fellows, an internal medicine physician, clinical nurse specialists, social workers, and palliative care experts. The health care providers represented two major medical facilities in the national

capital area. Two of the providers had significant experience serving overseas at a military treatment facility in Europe. Analysis of the transcripts and development of a list of themes is in progress. One group not represented is the TRICARE contractor providers. The array of representation from various healthcare provider groups will be discussed with the research team to determine which additional health care provider groups or professions need to be included for proper diversity.

Analysis of the Military Health System Benefit

Relevant objective in SOW: Objective 3 (FY 03 proposal)

The actual health care benefits likely to be used by a military family and child with a life-threatening illness were analyzed with specific citation, description, definitions and comments. This analysis was included in the Annual Progress Report for 2004. (Appendix 6) The components of a CHI PACC[®] program were listed from the literature and compared to the benefits available through TRICARE. The major categories of services noted to be “missing” from the MHS benefit were: care coordination as a separate, proactive service; respite care and home health care, both having some administrative flexibility regarding the skill level of the individual providing the services; and bereavement counseling after the child’s death, that was not necessarily linked to traditional mental health services. In addition, the approach to disease management for these children should require the development of a written plan of care with parental input that integrates palliative care concurrently with disease-directed care and that is family centered and culturally sensitive. These philosophical principles are emerging world wide as the standard of care for children with life threatening illnesses.

Based on this analysis, a draft program rules document for a palliative care program benefit was written (Appendix 7). This draft document outlined the complete elements of an ideal integrated palliative care program that would supplement the existing benefit. Some of the benefits in the proposed rule, such as expressive therapies and the reimbursement of the parent who stays home from work to provide nursing/custodial care, are not standards and services from the CHI PACC[®] proposed standards, but are services that have been integrated into palliative care by other nationally recognized pediatric palliative care programs. These services would be difficult to provide under the current benefit because of the mandate that TRICARE dollars be used to pay only for medically necessary services, delivered by qualified providers.

Analysis of detailed parent interviews and a direct question to the parent advisory group indicated that care coordination is the most vital of the “missing” services. Although the current practice in the MHS is to provide some aspects of case management, much of the coordination is being done either by the primary care physician or by the parents themselves. This practice adds additional burden to the parents in the care of their children, is time consuming, not well organized or comprehensive, and likely emotionally draining and often distracting from the primary roles of the physicians and the parents.

Members of the team held meetings with the senior representatives in the TRICARE Management Activity (TMA) to present preliminary thoughts and possible recommendations and to discuss TRICARE issues as related to policy and strategy for this project. They discussed the mechanism of the demonstration authority and the requirements for using this process to

implement the project under TRICARE. Demonstration projects allow for some flexibility of the benefit with appropriate outcome measures to assess effectiveness, much like the intent of the Medicaid waiver process. Although support for a full demonstration project was not forthcoming, what emerged from these discussions was an interest in care coordination as the primary focus of any recommendations. The TMA officials expressed support for improving care coordination and offered to provide a cost analysis of care coordination, along with the additional services of respite care, home health care with provider flexibility and bereavement counseling, done by their consultants. This analysis is currently underway.

Population and Eligibility Criteria

Relevant objective in SOW: Objective 4 (FY 03 proposal), Objective 2 (FY 04 proposal)

Attempts to obtain population estimates on the potentially eligible children among military beneficiaries using the avenues for data collection and analysis previously described in the Annual Progress Report from 2004 were not successful. Data available through this particular consultant included only TRICARE prime beneficiaries, which would skew the population estimates.

Review of an approach drawing on the International Classification of Diseases, Revision 9 (ICD-9) codes and severity indices used by the states of Kentucky and Utah to determine eligibility for their CHI PACC[®] Medicaid waiver applications showed a very wide variation in the severity of diseases that could be included if one searched on the ICD-9 codes alone. Many of those diagnoses counted would not be appropriate for a palliative care program. Furthermore, the indices of severity necessary to isolate those patients with life-threatening conditions from those with just chronic conditions are not easily searchable in the MHS databases.

The research team searched the literature and queried known programs for how prevalence rates and estimates of numbers were calculated for children in the U.S. as a whole, within particular health systems in the U.S., and in other health system settings in other countries. They found three approaches to estimating numbers of children with life-threatening conditions.

1. Count deaths over a defined period of time in the Medicaid population, e.g. Kentucky CHI-PACC[®] program. This method only works for programs that determine eligibility based on proximity to death and leads to an underestimate of the population.
2. Figure current costs, then define eligible children and design a program to fit within this cost, e.g. Utah's earlier efforts and the current 1915c waivers in Medicaid. This method works for programs that must show cost neutrality and leads to limitations of entitlement and waiting lists for the program. Because the MHS is an entitlement program, all eligible children must receive the benefit based on need and cannot be excluded by cost considerations.
3. Start with a definition of children with life-threatening conditions and then count children that fit that definition. Approaches to defining eligibility include using a narrow definition and then counting from health records, e.g. the United Kingdom (UK) data or employing a broad definition and counting all children with health care special needs (CSHCN) based diagnosis (ICD-9 codes); e.g. the method used by the National Association of Children's Hospitals and Related Institutions (NACHRI).

The approach used by the United Kingdom seemed most applicable to the military population. The U.K. definition of children with life threatening illness was based on a non-categorical description first proposed by the Association for Care of Children with Life-Threatening or Terminal Illnesses and Their Families (ACT) (Royal College of Pediatrics, Great Britain), and later endorsed by Himmelstein in his 2004 paperⁱⁱⁱ. This non-categorical approach to defining life threatening illnesses outlines the various pathways or disease-related trajectories towards death or the possibility of death over the natural course of the illness, rather than listing types of diseases by using specific ICD-9 diagnostic codes. This definition seemed to best describe our intended population as it enabled the inclusion of children, who were more likely to benefit from palliative care, based more on the severity of the illness rather than a diagnosis alone. Use of this definition could also better demonstrate different health care usage patterns and costs among the four different descriptions (perhaps connoting different management strategies); was manageable for a database search; and could guide policy decisions in program development. These definitions are: Group A. Progressive conditions in which treatment is exclusively palliative from point of diagnosis; Group B. Conditions requiring long periods of intensive treatment aimed at prolonging life and improving the quality of life, but ultimately have no cure; Group C. Conditions for which curative treatment is possible but may fail; Group D. Conditions with severe, non-progressive disability causing extreme vulnerability to health complications which themselves might lead to death.

Using this definition, data from different districts in the United Kingdom indicated that the prevalence of life-threatening conditions ranged between 1.0:1000 to 1.72:1000.^{iii,iv,v} The U.K. method counted actual records to determine prevalence and the counts included children living with life threatening illness with the goal of developing a program for these children. The differences in the rates could be due, in part, to differences in defining the population and/or the method of determining the population. The U.K method most closely approximated the requirements for estimating the population within the MHS. These non-categorical definitions most suited the approach preferred by this team. By applying this prevalence rate of between 1.0:1000 and 1.72:1000 to the MHS, the approximate number of children in the military with life-threatening conditions is estimated to be between 2,408 and 4,141 children out of a total of 2,641,554 pediatric beneficiaries.

^{iv} Lenton SW, Stallard P, Lewis M, Mastroyannopoulou K, (2001). Prevalence and morbidity associated with nonmalignant life threatening conditions in childhood. *Child Care, Health and Development*, 27 (5): 389-398.

^v Maguire H (2000). Assessment of need of life-limited children in Northern Ireland. Northern Ireland Hospice Children's Service.

This estimate for children in the MHS with life threatening conditions was compared with a population count obtained from an actual search of MHS databases. Since the cost and time for counting actual records was prohibitive, representative diagnoses and corresponding ICD-9 codes for each disease trajectory were selected by the team for use in the database search. Diagnostic codes were chosen by reviewing lists from state Medicaid waiver programs, by reviewing diagnostic lists from military programs for special needs, such as Program for Persons with Disabilities and were based on clinical experience, with the realization that using only these codes in the search would produce an underestimate of the numbers of children with each type of disease course. The diagnoses and corresponding ICD-9 codes for the four groups are shown in the following chart:

ICD-9 codes for conditions

Our designation for this condition	Description	Examples	ICD-9 codes
A	Progressive	SMA, trisomy 13,18, severe asphyxia	335.0, 335.10, 335.11, 758.1, 758.1, 758.3, 768.0, 768.1, 768.2, 768.5
B	Require long periods of intensive care aimed at improving quality of life	Cystic fibrosis, muscular dystrophy	277.00, 277.01, 359.1
C	Curative treatment is possible but may fail	Any childhood leukemia or cancer	191.x, 204.xx, 206.xx, 207.xx, 208.xx, 209.xx
D	Severe, nonprogressive, extreme vulnerability	Spastic quadriplegia, tracheostomy	343.1, V55.0

The database searched was the MHS Management Analysis and Reporting Tool (M2). M2 is a powerful tool used to obtain summary and detailed views of population, clinical, and financial data from all MHS regions. M2 includes Military Treatment Facility (MTF) and commercial network claims data integrated with eligibility and enrollment data. This integrated data enhances support to healthcare managers across the MHS. M2 allows users to perform trend analyses, conduct patient and provider profiling studies, and conduct business case analyses to maximize health plan efficiency. Within M2 are the MTF Standard Inpatient Data Record (SIDR), the Standard Ambulatory Data Record (SADR), and the purchased care information known as the Health Care Service Record (HCSR). The search encompassed patient data for a two year span (October 1, 2000 – September 30, 2002) for children in the military health system 0-24 years who were alive during any part of the study period. The data indicated that a total of 3976 children with life threatening illnesses are in the MHS for a prevalence rate of 0.15%. This number falls within the calculated range of eligible children in the MHS based on the U.K.

prevalence rates (0.10% - 0.172% or between 2,408 and 4,141 children). The death rate data may be an underestimate, as the most accurate reporting of deaths occurs only when a child dies in a health care facility.

Counts of Children with LTCs in the MHS

Our designation for this condition	Description	Numbers of Children Alive at End of Study Period	Numbers of Children Who Died During Study Period
A	Progressive	728	25
B	Require long periods of intensive care aimed at improving quality of life	964	8
C	Curative treatment is possible but may fail	1239	54
D	Severe, nonprogressive, extreme vulnerability	940	18
Total		3871	105

Resources Available to Military Families

Relevant objective in SOW: Objectives 3 and 5 (FY 03 proposal)

The Coordinating Center (TCC) was primarily responsible for conducting a literature review on resources; developing a resource assessment tool and researching what resources are typically available to families in a community. This aspect of the study was designed to answer the following questions: What types of supports are available to children with life threatening conditions and their families? Where is information about community resources located? What is the process for accessing community resource information? What are some of the barriers for families in identifying and finding resource information? What strategies can be incorporated in a new model design to optimize access to information about community resources? The attached document is the completed analysis to date. (Appendix 8) Only summary conclusions and recommendations will be provided in this portion of the annual progress report.

Based on an extensive review of potential resources for children with life threatening conditions, there appear to be numerous possible sources of support available to military families living in the National Capital Area (NCA). Many of the resources are national in scope or government related and, therefore, available in other areas of the country, or otherwise commonly available in most communities. Hence, the information gleaned from this study can be generalized to communities other than the NCA. However, much of the problem seems to lie in the barriers to

accessing services rather than in their lack of availability. Types of barriers include limits set by specific diagnostic or financial eligibility criteria, geographic limitations, lack of knowledge or skills with the pediatric population, prohibitive costs, waiting lists or enrollment caps. Further analysis of resources compared to the needs assessment could reveal additional gaps in existing resources for children and families in the military. These gaps will be further evaluated and ultimately incorporated into a new model design as other components of this project are completed.

A Resource Profile Chart (Appendix 8, Attachment G) has been developed to identify types of resources relevant to children with life threatening conditions and the general location of these resources. It is important to note that most organizations and programs that house resources for families have specific factors and guidelines that determine a child's and family's eligibility for the specific service. The details of these factors are far too many to include in the chart. The purpose of the chart is to be a general reference to identify some possible options and guidance to families seeking resources. The Resource Overview Analysis chart (Appendix 8, Attachment H) is an attempt to answer the original questions posed and provides an overview of the general conclusions relating to resources and the issues families might face in attempting to access services at the federal, state, and local levels as well as those resources within the military community.

Results of this work have led to the following preliminary recommendations for consideration in the new model design:

Education

- Educate families and providers regarding the types of resources that exist and where they may be located.
- Educate families of children with life threatening conditions to utilize existing military services such as Military One Source and Military Home Front.
- Educate Military One Source staff on the variety of specific resources that exist for families who have children with life threatening conditions to enhance dissemination of information to families who are seeking community support.

Coordination and Facilitation

- Consider care coordination as a means to assist families in accessing existing resources both in the military and private sectors.
- Develop linkages for families with Military One Source to optimize an information and referral role they are currently contracted to deliver to active military personnel.
- Encourage the collaboration of existing community programs that provide various types of coordination such as public libraries, Infant and Toddler Programs, school programs, Military One Source, etc. that already exist within the military or civilian world.

System Design

- Design information systems to support the dissemination and access to resource information focused on supporting children with life threatening conditions.
- Encourage family networking through such chat forums as Military and Specialized Training of Military Parents (STOMP). This type of networking provides families with experience and information on strategies to problem solve system barriers. A

- parent may get information to assist them in navigating systems and accessing services to support their children's needs.
- Incorporate quality indicators and metrics to measure usage and access to all possible resources that support families. By optimizing the use of resources within the military system, such as TRICARE and Military One Source, and supplementing these with resources that families can access outside of the military system, a full spectrum of services appears to be available to support families. This type of quality review may assist the developing model to better identify potential areas for process improvement, especially related to the process for accessing the resource, and help to address some of the areas of vulnerability.

Resource Database and Website Development

Relevant objective in SOW: Objective 7 (FY 03 proposal), Objectives 3 and 4 (FY 04 proposal)

The Coordinating Center initially proposed to develop a web-based database. The purpose of this database was to house the resource data identified during this review of resources. Since the ultimate goal of the project was to design a model that could be used across the MHS, the team felt that there was a need to present the resource information from a broader perspective, one that could be applied to any community. Therefore, the team determined that the specific data that would be collected and included in a database for the NCA would not be useful in a broad application of model design. In addition, the resource review findings included an extensive list of existing databases that are currently accessible on the Internet for families who have children with special healthcare needs. The project team requested a more global presentation of resources that currently exist based on the evolving nature of the project, the changing needs of the project team, and the existence of other resource databases. To meet that request, The Coordinating Center used the data obtained in the resource review to develop several charts to assist the project team in identifying trends, challenges and barriers related to community resources. (See documents presented under "Resources available to military families".) In addition, a Resource Profile Chart (Appendix 8, Attachment G) was developed and populated to list potential services and resources that are applicable to children with life threatening conditions and global programs that may provide access to such services. The Resource Profile Chart can be applied to any area of the United States where a model program may be developed.

Models of Care Coordination

Relevant objective in SOW: Objective 8 (FY 03 proposal)

Care coordination is emerging as a major focus of this project and most likely the key recommendation for a pediatric palliative care model. The Coordinating Center (TCC) has provided to the team background on case management as a service and a discussion on the various models of case management that are utilized in the general medical community. TCC has also outlined the broader services encompassed by care coordination and how this service might apply to military families of children with life-threatening illnesses.

Case management is defined by the Case Management Society of America (CMSA) as "a collaborative process of assessment, planning, facilitation and advocacy for options and services to meet an individual's health needs through communication and available resources to promote quality, cost-effective outcomes". (Definition obtained from CMSA Standards of Practice, 2002) Third party payers and managed care programs often use the term "case management", others prefer the term "care coordination". Typically case management may include activities such as disease management, benefits management and utilization review, while "care coordination" occurs when an individualized plan of care is implemented by a variety of service providers. (Committee on Children with Disabilities, Pediatrics, 1999) Care coordination is often the preferred term used in context of family centeredness as parents play such an integral role in the management of their child's care. For the purposes of this project, case management will be presented within a conceptual framework best described as child and family centered and the term care coordination seems to better describe this service for children with life threatening conditions.

Care coordination is a service commonly found in some of the state level programs discussed in this report, particularly those serving children with special health care needs. For example, care coordination is a component service provided with early intervention programs, developmental disability programs as well as the community based waivers for children. Care coordination is also identified by Children's Hospice International as a key component of the CHI PACC[®] model.

According to the Massachusetts Consortium for Children with Special Health Care Needs, "care coordination is a central, ongoing component of an effective system of care for children and youth with special health care needs and their families." (Care Coordination: Definition and Principles, prepared by the Care Coordination Work Group, Oct 2005) This same concept is widely accepted by the American Academy of Pediatrics (AAP) based on their support of the medical home concept. As defined by the AAP, a medical home is an approach to comprehensive primary care that is accessible, continuous, comprehensive, family-centered, coordinated, compassionate, and culturally effective. The AAP Committee on Children with Disabilities recently concluded that care coordination is an integral component to the efficient management of the multiple complex issues related to caring for children with special health care needs to result in optimal outcomes for children and their families. In addition, based on the needs of children across multiple health and human service systems, care coordination is a process that links children and families to services and resources. The care coordination of children with complex health care needs is often not provided by the pediatrician based on lack of time and staff. (Gupta, O'Connor and Quezada-Gomez, Pediatrics 2004)

Care coordination activities may offer benefits to families and to providers. Some specific activities that care coordination can provide in relationship to accessing resources may include but are not limited to the following:

- Assess the individual needs of the child and family
- Develop an individualized plan of care for the child incorporating the multidisciplinary team
- Understand the range of available community resources and public benefits

- Identify, locate and monitor community resources to assist the child and family
- Facilitate access to health and other services that support the needs of the child and family
- Optimize resources that are available to the child, while avoiding duplicative or unnecessary services and costs
- Facilitate effective communication between families and providers
- Assist the family to become more effective advocates for their child's needs

Work is still ongoing to determine which model of care coordination to use, what the requirements are and how to implement this model within the MHS.

Gap Analysis

Relevant objective in SOW: Objective 9 (FY 03 proposal)

Data from the research on the family needs assessment and the development of themes related to family needs is preliminary. Based on the findings to date, an initial comparison between needs and resources was made. In many areas, care coordination might be the service that can fill the gap for families' needs and their ability to access appropriate resources. The following chart provides a very preliminary attempt at addressing the gaps in resources. The gray areas of the chart represent topic categories identified as preliminary themes from focus group work. The themes are then further detailed in the far left column of the table. These details were cross referenced to resources that were found to exist in the general community setting that may address the challenges listed.

Access to healthcare and other services		
Challenge Identified in Focus Work Group	Possible Existing Resource	Comments
Services are hard to get	<ul style="list-style-type: none"> • Care coordination 	Identifying and locating possible resources. Facilitate application to resources. Assist with collecting documentation to obtain the resources.
Families dealing with conflict related to school	<ul style="list-style-type: none"> • Care coordination • Mediation 	Requires trouble shooting of issue and identification of possible solutions. Negotiation may be necessary to resolve the conflict.
Families dealing with conflict with TRICARE	<ul style="list-style-type: none"> • Care coordination 	This may be a benefit issue, communication issue or system issue.
Fighting for everything	<ul style="list-style-type: none"> • Care coordination 	This may be a benefit issue, communication issue or system issue. Managing expectations is important to avoid family feeling defeated.
Inflexible	<ul style="list-style-type: none"> • Care coordination 	This may be a benefit issue, communication issue or system issue. Additional options may need to identified and considered.

MA waivers are limited	• Care coordination	Pursue other programs or resources.
MHS is inconsistent - need people who know system	• Care coordination	Managing expectations is essential - could be asking the wrong person or department.
Continuity of care	• Care coordination	Managing expectations is essential.
Lack of time with physicians	• Care coordination	May be a system issue or communication issue.
Services are inconvenient (long wait times)	• Care coordination	May be a system issue or a specific provider issue.
Difficult relationships and communication with providers	• Care coordination • Counseling	May require education for parents related strategies for dealing with difficult personalities.
Emotional toll	• Counseling	
Spousal/ Partner relationships	• Counseling • Legal resources	

Employer Issues		
	Possible Existing Resource	Comments
Assistance with military environment	<ul style="list-style-type: none"> Care coordination could assist families in presenting the information to the employer and advocating for support EFMP would also play a role in this area 	These employer issues will require resources within the military system to resolve.
Education to commanders who are dealing with these types of personnel issues		
Conflict resolution resource related to dealing with military requirements		
Help with parents who are stationed abroad		

Survivor Issues		
	Possible Existing Resource	Comments
Care for children who survive illness, such as latent effects of CA treatment or how to talk to adolescents regarding fertility issues as a result of treatment.	Specialty counseling such as genetic counseling	

Education Plan

Relevant objective in SOW: Objective 2 (FY 03 proposal), Objectives 1 and 5 (FY 04 proposal)

As this project has evolved, the scope of the education plan has broadened to include more than the training of direct care providers and the education of families on the program benefits. The approach to the education plan will identify all appropriate stake holders in a pediatric palliative care program and the “education” required for the successful implementation of a proposed plan. The identification of the various stake holders will emerge from work done by the parent and provider needs assessment focus groups and interviews, and from the development of the components of the program model. The plan will outline the requirements for education,

methods for providing the education, to include traditional education curricula for direct care providers, web-based information and educational tools especially as related to the managed care support contractors, and marketing strategies for the providers and families, as well as the costs associated with developing and implementing the education plans. No specific work has been done in this area to date.

Standards of Care, Outcome Measures and Quality Assurance

Relevant objective in SOW: Objectives 6 and 10 (FY 03 proposal)

The existing document, the CHI PACC[®] Standards and Guidelines of Care, served as the basis for preliminary work on the development of standards and measurable outcomes. There are four basic standards for delivering pediatric palliative care: comprehensive written plan of care by an interdisciplinary team, a plan of care that integrates palliative care with disease-directed care, care from the point of diagnosis with an identified care coordinator, and adequate and flexible funding. For each of these standards, the team identified the key required components and developed a definition for each that is tailored for the military system. (Appendix 9) Work in this area will continue in the next year.

KEY RESEARCH ACCOMPLISHMENTS

- The USUHS research team has begun to develop themes from their interviews of parents and providers. An initial comparison with issues related to resource availability points to care coordination as a key component of any program model.
- Based on an extensive review of potential resources for children with life threatening conditions, there appears to be an abundance of possible sources of support available to military families. Barriers to availability may be related to the lack of awareness of the resource, accessibility issues, eligibility requirements, quality of the service provided, limited knowledge of how services could be applicable, or financial restrictions. Many of these barriers and challenges could be alleviated or obviated by consistent support through care coordination.
- An analysis of the military healthcare benefit revealed that certain services important to the provision of pediatric palliative care were either not included in the benefit or were not available in a way that would best help this population. These services include care coordination as a separate, proactive service; respite care and home health care, both having some administrative flexibility regarding the skill level of the individual providing the services; and bereavement counseling after the child's death that was not necessarily linked to traditional mental health services.
- Using methodology adapted from work done in the United Kingdom and a non-categorical approach to defining the population, reasonable estimates of the numbers of children with life threatening illness were obtained for a two year period from MHS and purchased care databases. The numbers were consistent with more global estimates derived by applying the percentage of children with life threatening illness obtained from the literature to the total number of eligible children in the MHS M2 database.

- Discussions with officials from TMA have led to preliminary interest and support for a focus on care coordination and recommendations on how to improve this service in the MHS.

REPORTABLE OUTCOMES

None at this time.

CONCLUSIONS

- The work for this last year will focus on the recommendations for a program model, to include implementation strategies and associated costs.
- The team will pursue any and all avenues for additional funding to support a demonstration or pilot of the program model.
- Two major areas of work, (1) education, training and marketing (Objective 6), and (2) outcome measures and quality assurance (Objective 10), have yet to be completed. Henry M. Jackson Foundation subcontractor, Children's Hospice International (CHI), has been responsible for taking the lead in these two areas since December 29, 2003, the beginning of the performance period of the subcontract. CHI's cost reimbursement subcontract expired December 28, 2005. Over the final six months of the contract, a concerted effort was made to get CHI to focus on these objectives, but with no tangible results. CHI has not made sufficient progress toward completion of these two objectives in the past two years to justify an extension or renewal of their subcontract. There is funding remaining on the subcontract (the exact amount to be determined when the subcontract is formally closed-out). Plans for the redirection of these funds to another subcontractor to complete these objectives will be developed in the near future. Over the course of the subcontract period of performance the following meetings, as noted below, provided CHI representatives updates on the course of the project to include team reporting of goals and tasks as assigned in statement of work.
- 12/28/03: Initial date of contract award for entire project from CDMRP to HJF.
- 11/4/04: Meeting with Ann Armstrong-Daily (CHI), David Lee (CHI) Cheryl Naulty (PI), Deona Howard (HJF) and Maxine Lippman (HJF, contracting) to sign subcontract.
 - Objectives included in SOW
 - Preliminary work on other objectives in CHI SOW done prior to that time.
- 11/17/04: Team meeting with Cheryl Naulty (PI), Deb Wills (WRAMC), Karen-Ann Lichtenstein(TCC), Julie Lausch (TCC), Carol Marsiglia (TCC, Jeanette Osbourne (CHI consultant), Pamela Cunningham(TMA), Virginia Randall (USUHS), David Lee (CHI), Jan Hanson (USUHS), Mel Bellin (USUHS) and Deona Howard (HJF)
 - Overview of total project; discussion on objectives 6 & 10.
- 12/17/04: CHI submission of annual report, written by David Lee (CHI)
 - Objective 6: reference to contract with Educational Development Center (EDC) re: plans to use their curriculum
 - Objective 10: Preliminary exploration of existing evaluation tolls or possible use of a consultant.

- 3/25/05: Meeting with Ann Armstrong-Daily (CHI), Jane Koppleman (CHI), Brian Greffe, MD (CHI consultant), Cheryl Naulty (PI), Deona Howard (HJF)
 - Introduction of Jane Koppleman, replacing David Lee.
 - Brief on project, changes in direction of several objectives, including 6 & 10.
 - Asked for rebudget and clarification of roles of new CHI staff and consultant.
- 5/4/05: Team meeting, including Jane Koppleman (CHI), Ann Armstrong-Daily (CHI), Cheryl Naulty (PI), Jan Hanson (USUHS), Virginia Randall (USUHS), Deona Howard (HJF), and Mildred Solomon, David Browning (EDC representatives/CHI consultants) to discuss role of EDC in project.
 - Changed directions from use of a specific palliative care curriculum (IPPC developed by EDC) to broader educational goals as well as possible EDC involvement in development of outcome measures.
- 6/15/05: Meeting at CHI with Jane Koppleman (CHI), Cheryl Naulty (PI) and Deona Howard (HJF) for help CHI frame their subcontract with EDC re: objectives 6 & 10.
- 7/13/05: Team meeting, including Jane Koppleman (CHI), Ann Armstrong-Daily (CHI), and Brian Greffe (CHI consultant) plus Mark Edelstein, Anna Romer, Mildred Solomon (EDC representatives), Cheryl Naulty (PI), Carol Marsiglia (TCC), Deb Wills (WRAMC), Jan Hanson (USUHS), Deona Howard (HJF). Entire meeting devoted to discussions on objectives 6 & 10.
- 7/22/05: HJF contract office reviewed CHI/EDC contract language at CHI's request.
- 8/24/05: Meeting at CHI with Jane Koppleman (CHI), Cheryl Naulty (PI), and Deona Howard (HJF) to reevaluate CHI SOW; purpose: to clarify for CHI tasks completed and tasks remaining, including work for objectives 6 & 10.
- 9/7/05: Team meeting with Cheryl Naulty (PI), Carol Marsiglia (TCC), Karen-Ann Lichtenstein (TCC), Jason Cervenka (USUHS), Jane Koppelman (CHI), Jan Hanson (USUHS), Pam Cunningham (TMA), and Deona Howard (HJF)
 - Reviewed all objectives for entire team so everyone understood what work was completed; what work remained; how certain objectives had changed or were not longer valid based on findings to date.
 - CHI assigned task: schedule brainstorming session with EDC regarding objectives 6 & 10.
- 9/14/05: Team meeting with Cheryl Naulty (PI), Carol Marsiglia (TCC), Karen-Ann Lichtenstein (TCC), Jason Cervenka (USUHS), Jane Koppelman (CHI), Brian Greffe (CHI consultant), Jan Hanson (USUHS), Marc Edelstein (EDC representative/CHI consultant), Anna Romer (EDC representative/CHI consultant), Deona Howard (HJF)
- CHI assigned tasks
 - Send out notice for planned education brain storming session with EDC
 - Send out notice for planned outcome measures/quality assurance brainstorming session with EDC.
- 9/21/05: Meeting at CHI with Jane Koppleman (CHI), Deona Howard (HJF), Cheryl Naulty (PI) on revised SOW
- 9/26/05: Received CHI signed SOW, which indicated completed and outstanding objectives, including 6 & 10.
- 10/12/05: Team meeting with Cheryl Naulty (PI), Carol Marsiglia (TCC), Karen-Ann Lichtenstein (TCC), Jan Hanson (USUHS), Jane Koppleman (CHI), Brian Greffe (CHI consultant), and Deona Howard (HJF)

- CHI presented proposed evaluation tool
 - CHI task: to incorporate input from entire team and continue to develop tool in conjunction with EDC contractors.
- 11/23/05: Meeting at HJF with Jane Koppleman (CHI), Ann Armstrong-Daily (CHI), Marina Maratos (HJF), Gary Ashton (HJF), Maxine Lippman (HJF), Deona Howard (HJF), Cheryl Naulty (PI)
 - Purpose: to review status of CHI deliverables.

APPENDIX 1

IRB Status

USUHS

- Amendment 6, which modified the protocol and consent forms to include changes requested by WRAMC, approved 4/11/05.
- Amendment 7, which modified the parent consent form approved 5/10/05.
- Amendment 8, which added Wright Patterson to replace Keesler Air Force Base as a study site submitted 10/19/05.
- Annual review and continuing approval application approved on 12/1/05.
- Second level reviews completed for all approved site locations.
- Current Status: Approved until 11/30/2006.

WRAMC

- Signed MOA received on 5/9/2005.
- Revised application submitted on 5/9/2005.
- Worked through detailed revision of CRADA.
- Protocol approved 6/3/2005.
- Annual review approved 10/12/05.
- Self audit checklist submitted 12/21/05.
- Current Status: Approved until 6/3/06.

NNMC

- Revised applications submitted on 5/24/05 and 6/10/05.
- Signed MOA received on 6/6/05.
- Protocol approved 6/17/05.
- Current Status: Approved until 6/17/2006.

Malcolm Grow

- Signed MOA received 3/31/05.
- Annual report approved 7/11/05.
- Current Status: Approved until 7/11/06.

Madigan

- Protocol application submitted 9/9/05.
- Revised consent forms submitted 12/14/05.
- Current Status: Currently in review at Madigan IRB.

Keesler Air Force Base

- Protocol application submitted 5/3/05.
- Signed MOA received 6/24/05.
- Protocol approved.
- Current Status: Keesler removed from study due to Hurricane Katrina.

Wright-Patterson

- Protocol application submitted 10/13/05.

- Signed MOA received 10/13/05.
- Current Status: Coordinating with site PI to respond to IRB comments.

San Diego

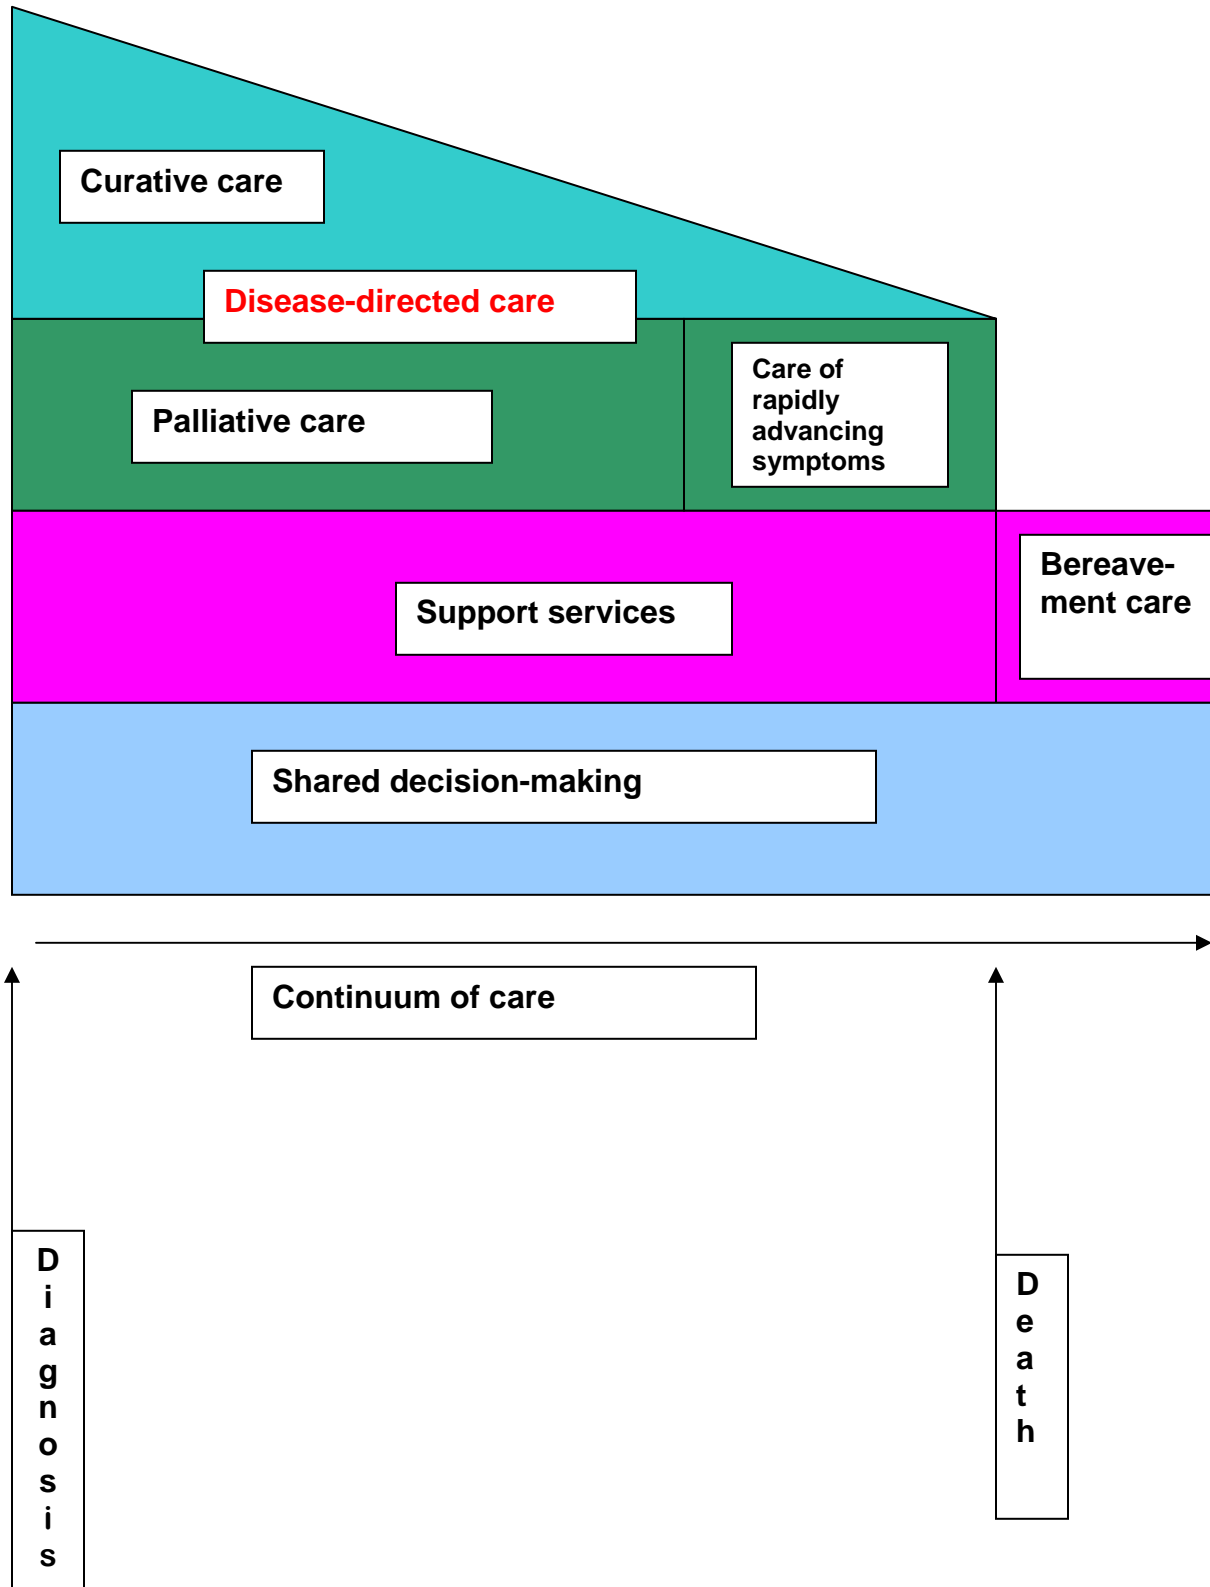

- Signed MOA received 5/19/05.
- Protocol application submitted to IRB 8/3/05.
- Current Status: Awaiting scientific review from Chief of Pediatrics at San Diego for the past three months before complete IRB review can take place.

Ft. Leavenworth

- Application documentation received.
- Current Status: Application being prepared for submission.

APPENDIX 2

Tentative Schematic Diagram of Care

APPENDIX 3

MCARE – Summary of the TRICARE Benefit and the Military Health System

If your child gets sick

- All medically necessary care is provided through MHS.

1. If active duty:

Care at Military Treatment Facilities	All or mostly covered
Outpatient Care	TRICARE Prime – co-pays & cost-shares
	TRICARE Extra – co-pays & cost-shares 15%
	TRICARE Standard – co-pays & cost-shares 20%

2. If retired:

Care at Military Treatment Facilities	All or mostly covered
Outpatient Care	TRICARE Prime – co-pays & cost-shares \$460 annual fee per family
	TRICARE Extra – co-pays & cost-shares 20%
	TRICARE Standard – co-pays & cost-shares 25%

3. If you have supplemental insurance – co-pays and cost-shares are covered.

If your child has a long-term need for home health care and has a qualifying condition (mental retardation, a serious physical disability, an extraordinary physical or psychological condition that renders the child home-bound, or receives early intervention services under IDEA,) the child may be eligible for home health care, respite care, and therapy services delivered under a written plan of care.

1. If active duty:

ECHO/EHHC Provides*:	1. Up to \$2500 per month of services under the plan of care, after a small co-pay.
ECHO/EHHC requires enrollment in the EFMP	2. EHHC – home health care not limited to part time or intermittent care
	3. EHHC – respite care up to 8 hours per day, 5 days per week

*ECHO/EHHC replaces PFPWD.
It is not implemented yet, but the regulation is signed

2. If retired – not eligible for ECHO/EHHC – can pursue Medicaid if
a) Meet income restrictions
b) Apply for waiver

Medically Necessary Care includes:	
1. Outpatient doctor visits	6. Limited in-home skilled nursing
2. Inpatient care	7. Limited occupational therapy, physical therapy, speech therapy
3. Medical procedures	8. Diagnostic evaluations and procedures
4. Durable medical equipment	9. Transportation if medical care is needed during the transport
5. Medications and pharmacy supplies	10. Preventive health care

APPENDIX 4

***Quality of Life of Caregivers of Children with Special Needs
Survey
(Randall and Hanson)***

Quality-of-Life of Caregivers of Children with Special Needs

For each question, fill in the circle that best describes your answer. Use circles 2 or 4 if your answer falls between 1,3 or 5. There are no "correct" answers, everyone experiences the caregiving challenges differently.

1. Can you help your child gain living skills?

- ☐ 1. I have a very difficult time helping my child learn living skills.
- ☐ 2.
- ☐ 3. About half the time, I can help my child learn living skills, but sometimes it is a struggle.
- ☐ 4.
- ☐ 5. I can easily help my child learn living skills.

2. Are you able to enjoy your child?

- ☐ 1. I can't find anything that my child and I enjoy doing together and I don't know where to start.
- ☐ 2.
- ☐ 3. I can sometimes find enjoyable things to do with my child.
- ☐ 4.
- ☐ 5. I am usually able to find or create fun experiences for me and my child.

3. Does your child have all the equipment, therapy, and special education he/she needs?

- ☐ 1. I have not been able to get the appropriate education, therapy, and/or equipment for my child.
- ☐ 2.
- ☐ 3. I have found some of the education, therapy, and/or equipment that my child needs.
- ☐ 4.
- ☐ 5. I have found all the resources necessary to enhance my child's medical care and education.

4. Are you able to be an advocate?

- ☐ 1. I haven't figured out how to be an effective advocate for my own child or for other children.
- ☐ 2.
- ☐ 3. I can advocate for my own child, but I haven't yet found ways to make a difference for others.
- ☐ 4.
- ☐ 5. I have found ways to make life better for my child and others.

5. How has being a parent of a child with special needs changed your life? How have the changes affected you?

- ☐ 1. Being a parent of my child consumes my life. I resent the changes I've had to make in my life.
- ☐ 2.
- ☐ 3. I'm resigned to the changes I've had to make and begun to integrate my child's needs and my own.
- ☐ 4.
- ☐ 5. I'm comfortable with the new priorities in my life.

6. Who makes the health care decisions about your child?

- ☐ 1. I don't know much about my child's condition and I let the experts make the decisions.
- ☐ 2.
- ☐ 3. I've learned some things about my child's condition and I make suggestions to the care providers.
- ☐ 4.
- ☐ 5. I know a lot and share opinions and negotiate decisions with the care providers

7. Do you understand how to get the services your child and family need?

- ☐ 1. I don't know how to get services for my child and I usually give up or get upset.
- ☐ 2.
- ☐ 3. I know how to get services but it involves lying, getting hysterical, or becoming nasty.
- ☐ 4.
- ☐ 5. I know how to get services and I can usually do it in a positive way.

8. How do you spend your time?

- ☐ 1. The needs of my child are so great I don't get anything else done.
- ☐ 2.
- ☐ 3. Most of the time, I can get some housework and shopping done.
- ☐ 4.
- ☐ 5. I spend time taking care of my child but I also get many other things done.

9. Are you concerned about your child's safety?

- ☐ 1.Safety is a daily concern for me regarding my child.
- ☐ 2.
- ☐ 3.My child is safe at home but I worry about him/her in other places.
- ☐ 4.
- ☐ 5.My child has no safety issues because of his/her special needs.

10. How has having a child with special needs affected your finances?

- ☐ 1.I worry about how to pay the bills and my child doesn't have all the things he/she needs.
- ☐ 2.
- ☐ 3.I can manage to make ends meet but it's a strain.
- ☐ 4.
- ☐ 5.I'm OK financially.

11. Is your housing adequate to meet the needs of your child and family?

- ☐ 1.My child's needs cannot be met in our current housing.
- ☐ 2.
- ☐ 3.I've had to compromise on housing because of my child.
- ☐ 4.
- ☐ 5.I have a safe and affordable house that meets my child's needs.

12. Do your child's health care providers listen to you?

- ☐ 1.My child's health care providers don't seem to care about my feelings.
- ☐ 2.
- ☐ 3.Sometimes they listen but sometimes they are too busy.
- ☐ 4.
- ☐ 5.We have care providers who always listen and believe me.

13. Can you reach your child's health care providers when you need to?

- ☐ 1.I am never able to get the health care provider on the phone in a reasonable period of time.
- ☐ 2.
- ☐ 3.Sometimes I can reach him/her in a reasonable time.
- ☐ 4.
- ☐ 5.I can always talk to him/her in a reasonable time.

14. Do you know who to call for a problem or question about your child's health?

- ☐ 1.I'm not sure of who to call for which problem.
- ☐ 2.
- ☐ 3.I know some physicians to call for some problems.
- ☐ 4.
- ☐ 5.I know exactly who to call for any problem.

15. Do you understand your child's medications?

- ☐ 1.I don't understand anything about my child's medications.
- ☐ 2.
- ☐ 3.I have partial understanding of my child's medications.
- ☐ 4.
- ☐ 5.I have an excellent understanding of any medication my child takes.

16. What happens when you are late for an appointment with your child's doctor?

- ☐ 1.If I'm late for an appointment, I have to reschedule and everyone is rude.
- ☐ 2.
- ☐ 3.If I'm late, we are seen but it is uncomfortable.
- ☐ 4.
- ☐ 5.If I'm late, I know the doctors and nurses understand and will see my child.

17. Are you comfortable with the interview style of your child's doctor?

- ☐ 1.I don't feel comfortable with the questions or the insensitive manner of the doctors.
- ☐ 2.
- ☐ 3.I am somewhat comfortable with my doctor's questions and manner.
- ☐ 4.
- ☐ 5.I am very comfortable with my doctor's questions and manner.

18. Does your child's doctor respond to the developmental and emotional needs of your child?

- ☐ 1.My child's doctor is insensitive to the developmental and emotional needs of my child.
- ☐ 2.
- ☐ 3.My child's doctor sometimes responds to my child's needs.
- ☐ 4.
- ☐ 5.My child's doctor always responds to my child's needs.

19. Do you trust your child's primary care provider?

- ☐ 1. My child does not have a primary care provider or if he/she does, I don't trust them.
- ☐ 2.
- ☐ 3. I have a fair amount of confidence in my child's primary care provider.
- ☐ 4.
- ☐ 5. I trust my child's primary care provider completely.

20. Do you know what to do in an emergency?

- ☐ 1. I am not at all sure what to do in a medical emergency.
- ☐ 2.
- ☐ 3. I have a general idea of what to do in an emergency.
- ☐ 4.
- ☐ 5. I have a written plan for what to do in an emergency.

21. Do you need help coordinating your child's care?

- ☐ 1. I have to do all the care coordination myself and the hassle and complexity are overwhelming.
- ☐ 2.
- ☐ 3. Most of the time I can handle the coordination and paperwork, but I would like some help.
- ☐ 4.
- ☐ 5. I don't need any help with care coordination.

22. Did your child start receiving services as soon as he/she needed to?

- ☐ 1. The diagnosis was made too late for my child's best interests and he/she missed needed services.
- ☐ 2.
- ☐ 3. It took longer than I wanted, but my child didn't miss any important services.
- ☐ 4.
- ☐ 5. From the time I suspected something wrong, to when services started, was very short.

23. Are your child's "well child" needs (immunizations, routine discussions about safety and discipline) being taken care of?

- ☐ 1. The "well child" needs of my child are always overlooked.
- ☐ 2.
- ☐ 3. The "well child" needs of my child are sometimes met.
- ☐ 4.
- ☐ 5. The "well child" needs of my child are always met.

24. Is your child's doctor sensitive to ethnic and cultural diversity?

- ☐ 1. I don't think my child's doctor ever heard of cultural diversity or sensitivity training.
- ☐ 2.
- ☐ 3. My doctor tries to understand different cultural practices.
- ☐ 4.
- ☐ 5. My doctor understands my culture and beliefs and works with me.

25. How are your immediate family members coping?

- ☐ 1. My family members are having a very difficult time coping with my child's condition.
- ☐ 2.
- ☐ 3. My family members can usually cope.
- ☐ 4.
- ☐ 5. My family members are coping very well.

26. Have you begun to plan for your child's future?

- ☐ 1. The issues of my child's future are so difficult for me I can't begin to think about them.
- ☐ 2.
- ☐ 3. I have a good idea of what I need to do to prepare for the future.
- ☐ 4.
- ☐ 5. I've made all the plans that need to be made.

27. Are you getting the sleep you need?

- ☐ 1. Because of my child, I never get enough sleep and am perpetually fatigued.
- ☐ 2.
- ☐ 3. Sleep is only an occasional problem.
- ☐ 4.
- ☐ 5. Sleep is never a problem.

28. What has been the effect on you or your spouse's career of having a child with special needs?

- ☐ 1. One or both parents' careers have definitely been hurt by having a child with special needs.
- ☐ 2.
- ☐ 3. One or both careers may have been hurt.
- ☐ 4.
- ☐ 5. Neither parents' careers have been hurt.

29. Do you have any time to do something just for yourself?

- ☐ 1. I devote all my time to my child and have no spare time for myself.
- ☐ 2.
- ☐ 3. I have some time for myself to do things I like.
- ☐ 4.
- ☐ 5. I have plenty of time to do things just for myself.

30. Do you get a break from caregiving (respite care)?

- ☐ 1. We never get away from the constant demands of caregiving.
- ☐ 2.
- ☐ 3. We sometimes get away, but not enough.
- ☐ 4.
- ☐ 5. We have frequent enough breaks from caregiving.

31. Are you able to be hopeful?

- ☐ 1. I find no purpose or hope in this unfortunate situation for my child.
- ☐ 2.
- ☐ 3. Sometimes I can make sense out of what has happened and see some hope.
- ☐ 4.
- ☐ 5. I have been able to find inner peace about my child's condition.

32. Is grief and sadness a problem for you?

- ☐ 1. I feel constant grief and sadness over my child's condition.
- ☐ 2.
- ☐ 3. I usually feel grief and sadness.
- ☐ 4.
- ☐ 5. I usually do not feel grief or sadness.

35. Have you been injured in caring for your child? Has your child injured you?

- ☐ 1. I, myself, have been seriously injured.
- ☐ 2.
- ☐ 3. I have been mildly injured.
- ☐ 4.
- ☐ 5. I have never been injured.

36. Do you have any physical symptoms of stress?

- ☐ 1. I have many physical symptoms of stress like headaches, bowel problems, insomnia.
- ☐ 2.
- ☐ 3. I have a few mild physical symptoms of stress.
- ☐ 4.
- ☐ 5. I have no effects on my own physical health.

37. How much of a problem is worry for you?

- ☐ 1. I constantly worry about my child. There is never a time I do not think about it.
- ☐ 2.
- ☐ 3. I worry a fair amount but not all the time.
- ☐ 4.
- ☐ 5. I don't worry.

38. What kind of support do you have?

- ☐ 1. I feel isolated and alone. I have no support. I don't know who to ask for help.
- ☐ 2.
- ☐ 3. I get some support from family and friends, but basically I "go it alone."
- ☐ 4.
- ☐ 5. My support system of family and friends keeps me going.

39. Have you been able to maintain your religious beliefs?

- ☐ 1. Because of my child's condition, I am totally alienated from my previous religious beliefs.
- ☐ 2.
- ☐ 3. I am struggling with my beliefs and religion.
- ☐ 4.
- ☐ 5. I am at peace with my child's condition and my religious beliefs

40. Do you have the child care you need?

- ☐ 1. Appropriate affordable child care is a very big problem for me.
- ☐ 2.
- ☐ 3. Child care is somewhat a concern.
- ☐ 4.
- ☐ 5. Child care is never a concern.

Date : Interviewer : No :

edited for mCARE 5-28-04

41. Can you choose to stay-at-home or work outside the home if you want to?

- ☐ 1. I have no choice, I either am working because I have to or staying home because I have to.
- ☐ 2.
- ☐ 3. I have some choice and some support in my decision to work or stay at home.
- ☐ 4.
- ☐ 5. I can choose to either work or stay at home and I have all the support I need.

APPENDIX 5

12-1-05 Parent Themes

1. Access to Existing Health Care & Other Services

- a. access - access to doctor important
- b. access - access to services difficult
- c. access - conflict between TRICARE and schools on coverage
- d. access - everything is a fight
- e. access - fear of not getting needed services
- f. access - flexibility important
- g. access - inflexible rules cause difficulties
- h. access - limited Medicaid waiver access
- i. access - military health care system inconsistent
- j. access - need doctors who know the system
- k. access - no continuity of care
- l. access - not enough time with physicians
- m. access - preventive care hard to get
- n. access - services inconvenient
- o. access - system makes parents work harder
- p. access - transition barriers

2. Relationships & Communication with Providers

- a. comm - comm across cultures
- b. comm - empathy for health care providers
- c. comm - have to force conversations with doctors
- d. comm - insensitive comments or actions traumatic
- e. comm - language barrier
- f. comm - listen to parents
- g. comm - need information about the moment of death
- h. comm - need to know how to communicate under high stress
- i. comm - scared of asking questions
- j. comm - importance of sensitivity, care & support from providers
- k. comm - providers not always right or fully honest, parents feel betrayed

3. Emotional Toll on Parents & Family

- a. emot relat toll - child excluded socially
- b. emot relat toll - close to the edge emotionally
- c. emot relat toll - constant stress
- d. emot relat toll - fear of asking for community support
- e. emot relat toll - huge emotional toll
- f. emot relat toll - impacts whole life
- g. emot relat toll - need control over information what to expect
- h. emot relat toll - need help with emotional toll
- i. emot relat toll - no one knows what to say when child dies
- j. emot relat toll - relationship issues
- k. emot relat toll - stress of providing support

1. emot relat toll - tired of fighting

4. Military Issues

- a. military - command needs to know what to do
- b. military - conflict between military and family
- c. military - influence of military rank

5. Survivors

- a. need care for child survivors

6. Advocacy

- a. advocacy - parents advocate for children
- b. advocacy - parents do not know system
- c. advocacy - parents need advocacy education
- d. advocacy - parents need help advocating

7. Decision Making

- a. DM - hard to get information for shared decision making
- b. DM - need preparation for decisions near time of death
- c. DM - SDM with clear guidelines
- d. DM - shared decision making important
- e. DM - want inclusion in decisions
- f. DM - want information to make decisions
- g. DM - sometimes want someone else to make decisions
- h. DM - have to make difficult or risky decisions for child for qol

8. Meaning

- a. seeking to find positive meaning for child's life
- b. seeking to find positive meaning for their own lives

9. Parents' Roles

- a. parents' roles - vigilance because children are physically vulnerable
- b. parents' roles - need to maintain constant vigilance
- c. parents' roles - taking care for other family members
- d. parents' roles - taking care of self

10. Recommendations for the system

- a. rec - staff development about helping parents with the time of death
- b. rec - staff need support
- c. rec - staff development to understand children and families
- d. rec - learn from other programs that are working well

11. Care Coordination

- a. care coord - case management important
- b. care coord - lack of coordination of care between physicians

c. care coord - resources outside the military health system

12. Mental Health

- a. MH - need bereavement care
- b. MH - whole family needs support

13. Palliative Care

- a. palliative care - palliative care important
- b. palliative care - try to improve children's quality of life

14. Respite

- a. respite - respite care

APPENDIX 6

BENEFITS AVAILABLE IN TRICARE/CHAMPUS FOR CHILDREN WITH LIFE THREATENING ILLNESSES AND THEIR FAMILIES

Respite Care

BENEFIT	CITATION	DESCRIPTION OF BENEFIT	COMMENTS	GAP
Respite care	TRICARE Extended Care Health Option (ECHO). Final Rule/FR Vol 69, No 144, Jul 28, 2004	<p>(c)(7) Respite care. ECHO beneficiaries are eligible for 16 hours of respite care per month in any month during which the qualified beneficiary otherwise receives an ECHO benefit(s). Respite care is defined in Sec. 199.2. Respite care services will be provided by a TRICARE-authorized home health agency and will be designed to provide health care services for the covered beneficiary, and not baby-sitting or child-care services for other members of the family. The benefit will not be cumulative, that is, any respite care hours not used in one month will not be carried over or banked for use on another occasion.</p>	<p><i>Pending signature and contract modifications.</i></p> <p>Part 199.2 Definitions (b) Specific definitions. <u>Mental retardation</u> = A diagnosis of moderate or severe mental retardation make in accordance with the criteria of the current edition of the “Diagnostic and Statistical Manual of Mental Disorders” published by the American Psychiatric Association. <u>Serious physical disability</u> = Any physiological disorder or condition or anatomical loss affecting one or more body systems which has lasted, or with reasonable certainty is expected to last, for minimum period of 12 contiguous months, and which precludes the person with the disorder, condition or anatomical loss from unaided performance of at least one Major Life Activity as defined in this section. <u>Extraordinary condition</u> = A complex clinical condition, which resulted, or is expected to result, in extraordinary TRICARE/CHAMPUS costs or utilization, based on thresholds established by the Director, OCHAMPUS, or designee. <u>Extraordinary physical or psychological condition</u> = A complex physical or psychological clinical condition of such severity which results in the beneficiary being homebound as defined in this section. <u>Homebound</u> = A beneficiary’s condition is such that there exists a normal inability to leave home and, consequently, leaving home would require considerable and taxing effort....Absences...for the purpose of attending an educational program...shall not negate the beneficiary’s</p>	<p>Available only for TRICARE-eligible family members of active duty service members.</p> <p>Network inadequate.</p>

			<p>homebound status.</p> <p><u>Major Life Activity</u> = Breathing, cognition, hearing, seeing, and age appropriate ability essential to bathing, eating, grooming, speaking, stair use, toilet use, transferring, and walking.</p> <p><u>Respite care</u> = Respite care is short-term care for a patient in order to provide rest and change for those who have been caring for the patient at home, usually the patient's family.</p> <p>Government cost-share maximum monthly benefit of \$2,500.</p>	
	<p>Part 199.5 – TRICARE Extended Care Health Option (ECHO), Jul 28, 2004.</p> <p>(e)ECHO Home Health Care (EHHC).</p>	<p>(e)(2) EHHC beneficiaries whose plan of care includes frequent interventions by the primary caregiver(s) are eligible for respite care services in lieu of the ECHO general respite care benefit. For the purposes of this section, the term “frequent” means “more than two interventions during the eight-hour period per day that the primary caregiver would normally be sleeping.” The services provided...are those that can be performed ...by the average non-medical person...after has been trained by appropriate medical personnel. EHHC beneficiaries in this situation are eligible for a</p>	<p>(e)(3) EHHC eligibility. Beneficiaries meet all ECHO eligibility requirements and who: (ii) are homebound; (iii) require medically necessary skilled services that exceed the level of coverage provided under the Basic Program's home health care benefit; (iv) or require frequent interventions by the primary care giver(s) such that respite care services are necessary to allow primary caregiver(s) the opportunity to rest, and are case managed to include reassessment at least every 90 days and receive services as outlined in a written plan of care; and (vi) receive all home healthcare services from a TRICARE-authorized home health agency as described in Sec 199.6(b)(4)(xv), in the beneficiary's primary residence.</p> <p>(e)(4) EHHC plan of care. A written plan of care is required prior to authorizing ECHO home health care. The plan must include the type, frequency, scope and duration of the care provided and support the professional level of the provider.</p>	

		maximum of eight hours per day, 5 days per week, or respite care by a TRICARE-authorized home health agency.

Home Health Care

Home health care	Part 199.5 – TRICARE Extended Care Health Option (ECHO) July 28, 2004	<p>(e)(1) ECHO Home Health Care (EHHC). Home health care. Covered ECHO home health care services are the same as, and provided under the same conditions as those services described in Sec 199.4, except that they are not limited to part-time or intermittent services.</p> <p>(f)(3)(ii) ECHO home health care. The maximum annual Government cost-share for ECHO home health care, including EHHC respite care may not exceed the local wage-adjusted highest Medicare Resource Utilization Group (RUG-III) category cost for care in a TRICARE-authorized skilled nursing facility.</p>	Basic Program. 199.4(e)(21)(1) Home health services. Home health services are covered when furnished by, or under arrangement with, a home health agency (HHA) that participates in the TRICARE program and provides care on a visiting basis in the beneficiary's home. Covered HHA services are the same as those provided under Medicare under section 1861(m) of the Social Security Act. ...Benefit coverage...part-time or intermittent skilled nursing care, physical therapy, speech-language pathology, and occupational therapy, medical social services, part-time or intermittent services of a home health aide, medical supplies, a covered osteoporosis drug, and durable medical equipment, services at hospitals, SNFs or rehabilitation centers.	Network inadequate.
------------------	---	---	--	---------------------

Custodial Care

Custodial care	Part 199.5 – TRICARE Extended Care Health Option (ECHO) July 28, 2004	(e)(1)...Custodial care services, as defined in Sec. 199.2, may be provided to the extent such services are provided in conjunction with authorized ECHO home health care services, including the EHHC respite care benefit.	Custodial care services may be provided only as specifically set out in ECHO.	
----------------	---	--	---	--

Counseling Services

Bereave- ment care			Excluded in hospice care through Basic Program.	
Counseling for child	Part 199.4 – Basic Program	(ix) Treatment of mental disorders....the patient must be diagnosed by a CHAMPUS-authorized ...mental health professional to be suffering from a mental disorder...in order for treatment of a mental disorder to be medically or psychologically necessary, the patient must, as a result of a diagnosed mental disorder, be experiencing both physical or psychological distress and an impairment in his or her ability to function in appropriate occupational, education, or social roles.		
Counseling for family members before child's death	Part 199.4 – Basic Program	(ix) Treatment of mental disorders....the patient must be diagnosed by a CHAMPUS-authorized ...mental health professional to be suffering from a mental disorder...in order for treatment of a mental disorder to be medically or psychologically necessary, the patient must, as a result of a diagnosed mental disorder, be experiencing		

		both physical or psychological distress and an impairment in his or her ability to function in appropriate occupational, education, or social roles.

Care Management/Care Coordination Services

Care co-ordination				
Nursing case management				

Hospice

Hospice	Part 199.4 – Basic Program	<p>(19) Hospice Care. Hospice care is a program which provides an integrated set of services and supplies designed to care for the terminally ill. This type of care emphasizes palliative care and supportive services, such as pain control and home care, rather than cure-oriented services provide in institutions that are otherwise the primary focus under CHAMPUS. The benefit provides coverage for a humane and sensible approach to care during the last days of life for some terminally ill patients. (i) Benefit coverage. CHAMPUS beneficiaries who are terminally ill (that is, a life expectancy of six months or less if the disease runs its normal course) will be eligible for the following services and supplies in lieu of most other CHAMPUS benefits: (A) Physician services. (B) Nursing care. (C) Medical social services ... (1) Assessment of social and emotional factors ... (2)</p>	<p>Part 199.6 Authorized providers. Hospice programs. Hospice programs must be Medicare approved and meet all Medicare conditions of participation (42 CFR part 418) in relation to CHAMPUS patients in order to receive payment under the CHAMPUS program.... May be either a public agency or private organization which: (A) is primarily engaged in providing care and services described under Sec 199.4(e)(19) and makes such services available on a 24-hour basis. (B) Provides bereavement counseling for the immediate family or terminally ill individuals. (C) Provides for such care and services in individuals' homes, on an outpatient basis, and on a short term inpatient basis, (4) Have an interdisciplinary group composed of (i) physician; (ii) registered professional nurse; (iii) social worker; (iv) pastoral or other counselor. (5) Maintains central clinical records on all patients. (7) The hospice and all hospice employees must be licensed in accordance with applicable Federal, state and local laws and regulations.</p>	Must meet Medicaid definition of hospice care.
---------	----------------------------	---	---	--

		<p>Assessment of relationship between ...requirements and availability of community resources. (3)</p> <p>Appropriate action to obtain available community resources to assist in resolving the beneficiary's problem. (4)</p> <p>Counseling services that are required by the beneficiary. (D)</p> <p>Counseling services provided to the terminally ill individual and the family member or other persons caring for the individual at home...Bereavement counseling is not reimbursable. (E) Home health aide services ... and homemaker services.</p>

Additional Services

Child life services at home				
Massage therapy				
Music therapy				
Acu- puncture				

Equipment and Structural Alterations

<p>Durable equipment and durable medical equipment</p>	<p>Part 199.5 – TRICARE Extended Care Health Option (ECHO) July 28, 2004</p>	<p>(g)(2) Equipment (i) The TRICARE allowable amount for durable equipment and durable medical equipment shall be calculated in the same manner as durable medical equipment allowable through Sec. 199.4. (ii) Allocating equipment expense. The ECHO beneficiary...may, only at the time of the request for authorization of equipment, specify how the allowable cost of the equipment is to be allocated as an ECHO benefit. The entire allowable cost...may be allocated in the month of purchase...or may be prorated.</p> <p>(c)(7)(ii) Equipment adaptation. The allowable equipment purchase shall include such services and modifications to the equipment as necessary to make the equipment usable for a particular ECHO beneficiary. (iii) Equipment maintenance. Reasonable repairs and maintenance of beneficiary owned or rented durable</p>	<p>Part 199.2 –Definitions. <u>Durable equipment</u>. A device or apparatus which does not qualify as durable medical equipment and which is essential to the efficient arrest or reduction of functional loss resulting from, or the disabling effects of a qualifying condition. <u>Durable medical equipment</u>. Equipment for which the allowable charge is over \$100 and which: (1) Is medically necessary for the treatment of a covered illness or injury; (2) Improves the function of a malformed, diseased, or injured body part, or retards further deterioration of a patient’s physical condition; (3) Is primarily and customarily designed and intended to serve a medical purpose rather than primarily for transportation, comfort or convenience; (5) Provides the medically appropriate level of performance and quality for the medical condition present.</p>	
--	--	--	--	--

		equipment or durable medical equipment provide by this section shall be allowed while a beneficiary is registered in ECHO.		
Structural alterations to dwelling	Part 199.5 – TRICARE Extended Care Health Option (ECHO) July 28, 2004	(d)(3) Structural alterations. Alterations to living space and permanent fixtures attached thereto, including alterations necessary to accommodate installation of equipment or to facilitate entrance or exit, are excluded.		

APPENDIX 7

DRAFT PROGRAM “RULES” FOR MCARE

Comments and Questions:

1. Can hospital commander authorize payment for a benefit that is not authorized in the policy manual?
 - a. Maybe the pilot at WRAMC/NNMC will need to be a limited demo to get the authority to buy services such as respite care, case management, and bereavement care for which the child may not be eligible under the current TRICARE benefit structure.
2. Whether or not we need to write a proposed rule, i.e., new chapter for the policy manual, we need to describe the new program we are asking the hospital commanders to implement, being sure to include the QA features that the MHS uses (i.e., Medicaid or TRCARE approved home health agencies).
3. How is care coordination billed, paid for in the civilian community? Will we be able to justify a pediatric palliative care coordinator (to augment Deb and the NICU discharge planners) in the pilot that could be recognized in the “rule” as a service that can be purchased? I think this person could be either a nurse or social worker.
4. I’m not sure that some of the boiler plate for eligibility isn’t because the ECHO is limited to active duty. Anyway, it seems reasonable to continue services for children whose sponsor dies on active duty for 3 yrs, or under hostile fire until age 21.
5. Will claims from the home health agency or equipment vendor go through the usual channels or will they be handled differently in the pilot? If they go through the usual route, we’ll need to modify the codes that can be paid.
6. How does the MHS reimburse a family member for services? Who is a family member (sibling, grandparent, aunt, etc)?
7. What is the appeal mechanism if the care coordination team does not agree on something in the plan of care? Can the portions agreed upon be implemented? Does the plan of care need to be approved by someone else before government funds are committed? Who is that someone else and how long will it take?

mCARE
Integrated Palliative Care Program For Children With Life-Threatening Illnesses.

(a) General. (1) The TRICARE mCARE is a supplement to the Basic Program. It does not provide acute care nor benefits available through TRICARE Basic Program. mCARE benefits are available to children of active duty and retired sponsors. There is no cost-share liability to the sponsor nor a maximum monthly government liability.

(2) The purpose of mCARE is to provide a mechanism to coordinate and integrate palliative care, disease-directed care, and support for children with life-threatening illnesses and their families from diagnosis through treatment with hope for a cure to bereavement care if a cure is not obtained. Care provided through the mCARE program will be continuous, comprehensive, coordinated, family-centered, culturally-competent, and medically appropriate. It expands the benefits available to a child with a life-threatening illness and their family to include services defined in a Medicaid-approved pediatric hospice program.

(b) Eligibility. (1) The following categories of TRICARE/CHAMPUS PRIME beneficiaries with a qualifying condition are eligible for mCARE benefits.

(i) A child (as described in 10 U.S.C. 1072(2)(A),(D), or (I)) of a member or one of the Uniformed Services; or

(ii) An abused dependent child as described in Section 199.3(b)(2)(iii); or

(iii) A child (as described in 10 U.S.C. 1072(2)(A),(D), or (I)) of a member of one of the Uniformed Services who dies while on active duty. In such case the child remains eligible for benefits under the mCARE program for a period of three years from the date the active duty sponsor dies; or

(iv) A child (as described in 10 U.S.C. 1072(2)(A),(D), or (I)) or a deceased member of one of the Uniformed Services, who, at the time of death was eligible for receipt of hostile-fire pay, or died as a result of disease or injury incurred while eligible for such pay. In such case, the child remains eligible through midnight of the beneficiary's twenty-first birthday.

(2) Qualifying condition. Children will be determined to have a life-threatening qualifying condition by their primary care physician in coordination with their parents. The following are examples of qualifying conditions:

(i) Children with diseases for whom treatment is available, but may not be successful.

(ii) Children for whom aggressive treatment is available that may result in a good quality of life, but who, nevertheless, will die prematurely.

(iii) Children with progressive diseases who may live for prolonged periods of time.

(iv) Children with severe disabilities that are not progressive, but will likely lead to complications and premature death.

(3) Loss of mCARE eligibility. Upon separation from the service.

(c) mCARE benefit. Services that the Director, TRICARE management activity, or designee has determined are capable of ensuring the provision of an integrated program of palliative care, disease-directed care, and support as determined appropriate by the child's primary care physician and the family, includes, but are not limited to:

(1) Care coordination. Care coordination will be provided by a pediatric palliative care coordinator and will implement a comprehensive plan of care. Care coordination may be provided by the MTF or purchased from a TRICARE-approved home health agency or agency that coordinates care for CMS MEDICAID waiver programs and that has pediatric-trained and experienced staff. Care coordination is necessary to receive other benefits under this program.

(i) A written comprehensive plan of care will be developed within 2 weeks of referral to the mCARE program. The plan of care will include all services, durable medical equipment, and durable equipment necessary to address medical, social, educational, spiritual needs of the child, and support services for the family, although not all these services or equipment are necessarily purchased or provided through the MHS unless provided for below. The plan of care will be reviewed at least every 3 months and updated as needed. The written comprehensive plan of care will be developed by a team including the care coordinator, the parents, the child if appropriate, and the child's primary care physician and appropriate specialty care physicians.

(ii) A copy of the plan of care will be placed in the child's medical record, a copy provided to the parents, and a copy forwarded to the mCARE program manager at the MTF.

(iii) The plan of care will specify an emergency plan of action for the parents or school.

(iv) The plan of care will address the support a family requires when two or more family members have special needs.

(v) Parents and physicians will have access to educational materials preparing them for their role on the care coordination team.

(2) Respite care. mCARE beneficiaries are eligible for respite care for a maximum of eight hours per day, 5 days per week provided by a TRICARE-approved home health agency. In addition, two consecutive 24-hour periods per month may be provided. The level of training required by the respite care provider will be specified in the plan of care.

(3) Pre-bereavement and bereavement counseling. Counseling will be provided to the child and family as defined in the plan of care. A diagnosis of mental illness is not necessary for the child or any family member in order to qualify for this service. The level of training of the counselor will be specified in the plan of care.

(4) Home health care. Home health care will be provided as described in the plan of care. The level of training of the provider will be specified in the plan of care and may include any or all of the following: registered nurse, licensed practical nurse, personal attendant. Services are not limited to part-time or intermittent. The services of a registered nurse are not necessary to receive this benefit. If home health care is provided by a family member, that family member will be reimbursed for up to 40 hours per week at the same rate as a personal care attendant in a local TRICARE-approved home health agency.

(5) Custodial care. Custodial care is authorized under mCARE. If custodial care is provided by a family member, that family member will be reimbursed for up to 40 hours per week at the same rate as a personal care attendant in a local TRICARE-approved home health agency.

(6) Inpatient pediatric hospice services. Inpatient pediatric hospice services may be purchased when provided in a TRICARE-approved hospice program or a MEDICAID approved pediatric custodial care facility. A written plan of care is required and bereavement counseling services must be provided.

(7) Durable medical equipment and durable equipment. Durable medical equipment and durable equipment specified in the plan of care will be purchased by the MHS as provided for in Sec. 199.4 (?)

(8) Transportation. Specialized medical transportation (ambulance or taxi accommodating wheelchairs) will be purchased by the MHS when specified in the plan of care and necessary for the child to travel to and from the hospital or clinic.

(9) Structural alterations. As specified in the plan of care, up to \$1000 per child may be reimbursed to the family by the MHS for structural alterations necessary to provide care to the child in the family home.

(10) Coordination during PCS moves and deployments. The written plan of care will address the increased need for support a family faces during PCS moves or deployments when caring for a child with a life-threatening illness. The plan of care will provide for a seamless transition to the gaining medical facility.

(11) Expressive therapies. As defined in the written plan of care, expressive therapies such as music therapy, art therapy, and play therapy are authorized when provided by licensed or registered therapist.

(d) mCARE Exclusions. Benefits provided under the TRICARE Basic Program will not be provided through mCARE. These benefits will, however, be specified and coordinated in the written plan of care.

Background

Children of families in the military who have life threatening conditions can benefit from access to community resources to support their medical, educational, rehabilitation, social and emotional needs. The Coordinating Center studies community resources with a focus on types of resources available, access to resource information as well as the identification of any other factors that may have an effect on utilization of such services. Findings related to community resources will be used to inform other aspects of the Children's Hospice Project. The goal of the work performed by The Coordinating Center is to identify opportunities to improve access and utilization of community resources for children in the military under a model of care that is consistent with the philosophy of CHI/PACC™ models of palliative care.¹

The Coordinating Center evaluates community resources that may be available to children of military families the National Capital Area (NCA). As part of this evaluation, The Center examines types of existing community-based services, as well as their availability from several perspectives including location and accessibility. The primary purpose of this evaluation is to identify opportunities for utilization of services that exist outside of the scope of the military

¹ The CHI/PACC™ philosophy and model is a palliative care model promoted by Children's' Hospice International and is designed to manage medical, spiritual and psychological services needed by families to care for children and adolescents diagnosed with life-threatening and potentially life limiting conditions, from the time of diagnosis, with hope for a cure, through end of life care, and to bereavement follow-up.

health care system that may be unknown to or underutilized by families. Ideally, the project will lead to the development of an optimal model of care that ultimately supports families in the military and military readiness².

The national agenda promotes the delivery of family - centered services to children with chronic conditions.³ To be consistent with these initiatives, this community resource component of the Children's Hospice Project will incorporate considerations for resources that support family as well as the child with a life limiting condition. In addition, resource types will focus on those that may address needs of the family and child along the continuum, from time of diagnosis, through critical points during their lives, and at the end of life. The same philosophy is embraced by the CHI/PACCTM philosophy, which is to assist children and families within their homes and communities and to support the independence and care giving functions of the families through access to services and resources in the community and home. Additionally, the Department of Defense expresses significant interest in the concept of military readiness. This concept incorporates a comfort level of the soldier or officer that their family will be safe and provided for during episodes of military deployment. Therefore services that support the needs of the military family can be considered to support the military readiness of the soldier. Military parents may experience additional anxiety related to episodes of deployment if there are inadequate supports in place for their family and children while they are absent. This is particularly significant when a parent is deployed and leaving a child who has a life threatening illness.

² The Congressional Budget Office (CBO) uses the Joint Chiefs of Staff's definition of readiness, which is also referred to as operational or current readiness: the ability of forces to deploy quickly and perform initially in wartime as they were designed. (Joint Chiefs of Staff, The Dictionary of Military and Associated Terms, Joint Publication 1-02 (March 23, 1994)

³ The American Academy of Pediatrics supports this concept of family-centered care through their medical home initiatives. <http://www.medicalhomeinfo.org/about/index.html>

The Coordinating Center focuses on community based resources existing in the five-catchment areas representing the National Capitol Area as listed below:

- WRAMC
- Fort Detrick
- Fort Meade
- Fort Belvoir
- Aberdeen Proving Ground

The process used by The Coordinating Center to address the community resource evaluation includes a broad literature review, collection and analysis of resources found to exist in the 5 catchments areas listed and analysis of processes used to access resource information. It is anticipated that the process will yield some answers to the following questions related to resources. The questions are:

- What types of supports are available to children with life threatening condition and their families?
- Where is information about community resources located?
- What is the process for accessing community resource information?
- What are some of the barriers for families in identifying and finding resource information?
- What strategies can be incorporated in a new model design to optimize access to information about community resources?

Resource Review

A literature review is conducted to learn more about the broad subject of community resources, and describe the experience of finding and accessing resource services to ultimately support children with life threatening conditions and their families. For the purposes of this review, the working definitions are as follows:

- Community - A group of people living in the same locality and under the same government; the district or locality in which such a group lives; a group of people having the same interests.⁴
- Resource - Something that can be used for support or help, or an available supply that can be drawn on when needed; means that can be used to cope with a difficult situation.⁵

Of necessity, these definitions are broad and subject to individual connotation.

The broad-based definitions also accommodate the unique family perceptions of what is or is not supportive in the community in a particular situation. Considering the potential for omitting possible helpful supports to families from an inpatient and community standpoint, this report will incorporate the broad definitions as the basis for the study. Obviously, with such broad definitions, any one study may not feasibly capture every possible community resource in the areas identified. Therefore, additional searches for resources may need to occur once the specific population for Children's Hospice Project has been determined and their needs assessed through focus groups. It is anticipated that this exercise of reviewing community resources will demonstrate some trends and commonalties about the topic.

Sources and search parameters

The literature review was implemented at The University of Maryland Health Science Library, local public libraries, Fort Meade library used only by military families as well as other less formal community locations such as non professional journals, local newspapers, pediatrician office brochures, local health department information and at local community fairs. The initial search for information on resources was at the University of Maryland Health Science Library used by medical professionals such as nurses, physicians, and social workers. Multiple

⁴ Definition from Dictionary.com, 2004

⁵ Definition from Dictionary.com, 2004

database searches were performed with various search words used. Assistance was obtained by trained library staff to identify the most appropriate search words as well as the most appropriate databases for which to search. The following table depicts the results of the search.

Database	Search Words	Results	Related to Children's Hospice Community Resource
Social Work Abstracts 1997-2003	Children Programs and Services	87	21
CINAHL 1982 - 2003	Children Programs and Services	119	42
CINAHL 1982 - 2003	Care and Services for Terminal Illness	53	14
Psych Info	Hospice and Palliative Care Services	12	7
Psych Info	Children Program and Services	139	41
Directory on Disc*	Searches are pre-defined through categories of resource information		Results relate to specific category queried

Directory on Disc⁶ is a community information database designed to assist communities in finding information and services to provide an entry point for social assistance. This database provides information related to relationship issues, domestic violence, suicide, mental health concerns, substance abuse, grief, pregnancy, rape, abuse, crisis, housing assistance, disabilities, teen concerns, youth behavior problems and community information and referrals.

Following the review of literature at the Health Science Library, extensive Internet searches were performed with the following search results:

⁶ Directory on Disc is a product of 2-1-1 Big Bend, founded in 1970 as an independent non profit organization widely respected and recognized as a leading resource for confidential hotline support services and provides a free searchable resource database at www.211bigbend.org . United Way of the Big Bend has been the primary funding source.

Search Word	Search Engine	Results of Query	Possible applicability of Information found on 1st 10 pages of result review
Community Resources	Google	33,300,000	Search results are too variable for usefulness
Community Resources	Yahoo	44,700,000	Search results are too variable for usefulness
Children and Hospice	Google	1,200,000	Specific Hospices and General Information on Hospice and Children/Parents Dying
Children and Disabilities	Google	9,1800,000	General Information on Disabilities
Children Programs and Services	Google	21,000,000	National Programs/State and County Hospitals
Hospice and Palliative Care Services	Google	302,000	Specific Hospices and General Information on Hospice
Children and Terminal Illness	Google	541,000	Specific National/State Resources and Literature Reviews
Community Resource	MSN	9,649,923	Search results are too variable for usefulness
Children and Hospice	MSN	168,362	Specific Hospices and General Information on Hospice and Children/Parents Dying
Children and Disabilities	MSN	841,002	General Information on Disabilities
Children Programs and Services	MSN	2,169,473	Overview of Services Available/National Programs
Hospice and Palliative Care Services	MSN	31,138	Specific Hospices and General Information on Hospice
Children and Terminal Illness	MSN	67,406	Literature Reviews and Generic Information for Parents, Siblings and Classmates
Community Resource and chronic conditions	Yahoo	1,730,000	Condition specific Information, Community Databases

Responses and Challenges in Resource Development

One of the challenges experienced while performing the literature review on community resources is the unmanageable volume of responses to Internet and Database searches. The literature search, in some ways mimics some of the ways that families go about trying to locate information about resources for their children with life threatening conditions. Therefore, at

least some of the challenges that we encountered would be similar to those that are encountered by families. The primary challenge identified through this exercise of searching for community resources and related literature is the overwhelming number of search responses that created an unmanageable volume of information. For example, in Internet research, when we typed the key phrase "community resource" 44,700,000 websites were returned. When we used the keywords "children with life- threatening illnesses" 541,000 websites were cited. Similar phenomena occurred when we searched the HSL databases on the topic. A strategy to reduce the search to more manageable result is to be more specific about the resource being sought. This ability to search for specific keywords to locate resources has implications related to a family's level of skill related to querying the Internet. This strategy could be used if families had the information and confidence to query on a specific resource.

A second challenge with the initial literature review was the ratio of time spent and value attained through data searches. Sorting through a high volume of information to find potentially useful resources is extremely time consuming. Often, the significant time spent yielded minimal return in terms of meaningful and targeted information. Keeping in mind that children with life threatening conditions have time intensive needs, including frequent appointments to physicians, and complex medication and treatments regimens, this kind of search seems to be an unreasonable expenditure of time for families caring for their child with complex needs. In fact, when parents are dealing with a child who is hospitalized, they have indicated that they feel emotionally torn between providing constant support to their hospitalized child and caring for their other children at home ⁷. Assuming these parents and those who are primary caregivers in the home have time to sort through volumes of information to find effective supports may be an unreasonable expectation. In addition to time spent locating information regarding resources,

⁷ Melnyk and Alpert-Gillis, 1998

some resources require additional time and effort to obtain and complete an application for the desired service. In some instances such as Grant a Wish, Supplemental Security Income (SSI) or application for developmental disability services, there is a requirement for physician documentation and signature. For families, who are in desperate need of support and services, the process may pose barriers that prevent the family from ever accessing the desired support.

In relation to military families, who are dealing with stresses associated with single parenting and deployment, additional time and steps add yet an additional layer of action to successfully access the needed service.

While the Internet has become one of the most widely used communication media, assessing the credibility of the publisher as well as the relevance and accuracy of a document retrieved from the Net can be a problem. With the availability of Web server software, anyone can set up a Web site and publish any kind of data, which is then accessible to all. The Health on the Net (HON) Foundation has elaborated the Code of Conduct to help standardize the reliability of medical and health information available on the World Wide Web. The HON code defines a set of rules to hold Web site developers to basic ethical standards in the presentation of information and help make sure readers know the source and purpose of the data they are reading.⁸ In some situations, web sites reviewed provide no appropriate documentation regarding the credibility, currency or accuracy of the information they are presenting.

As part of the search exercise, contacts were made at the local public libraries and a military specific library to determine the availability of resources and information as well as the process to conduct searches performed for and by families. While there are multiple databases offering resource information, there are also resource guides, stocks of pamphlets in health centers and physician offices, flyers and fact sheets found in libraries, schools and military

⁸ <http://www.hon.ch/HONcode/Conduct.html>

treatment centers, much of the information is vague as to details of service and mechanisms for funding the service. Some resources found in pamphlet information were identified to be no longer relevant or programs and services that were no longer funded. This phenomena may be attributed to the services advertised and funded by less stable sources, such as foundations, short term demonstration projects or under funded public programs. As traditional helping organizations reflect the economic situation in the country, the capacity of funders and foundations to continue to achieve their missions in the community may be affected. In some situations, this may lead to longer waiting lists for services and curtailed or lost services for families and children. The military family is not immune from this phenomenon.

A publication cited to be the single largest and most widely referred to directory in the disability field is Exceptional Parent (EP) magazine.⁹ This publication has been in existence for over 35 years. Exceptional Parent magazine is published monthly and includes one special January issue each year that is the EP Annual Resource Guide. This annual guide includes comprehensive directories of organizations, associations, products and services for the special needs communities. The monthly publication is designed to provide information and support for parents, families, physicians and professionals who are supporting people with special needs. In addition to the publication, the information is also accessible through subscription on-line. Cost of this publication is approximately \$35.00 for the first year subscription.

There is an emotional toll on families of children with life threatening conditions that may affect their capacity to reach out for assistance. The literature sheds light on the fact that families caring for severely disabled children with complex health care needs experience extraordinarily high levels of responsibility in the absence of sustained support.¹⁰ Thus, families,

⁹ www.eparent.com

¹⁰ Robinson, Jackson and Townsley, 2001

as the primary managers of their children's care, are often the primary seekers of assistance and information as well. Yet, there are critical times in the child's situation when the emotional responses of families work against their capacity to function effectively in this area. For example, when children are hospitalized, especially for unplanned admission, or their situation changes negatively, some parents may experience anxiety and sometimes panic. At such times, their own behaviors may reflect disequilibrium, disorganization, vulnerability and even psychosomatic symptoms. Expressions of denial, anger, protest, guilt and sadness, and mourning typically follow these initial reactions.¹¹

The family experience may be exacerbated when there are other children in the family and particularly in military families should they occur when the spouse is deployed outside the home jurisdiction. If a family is relocated due to military responsibility, this will typically include a change in healthcare providers. Often families have established relationships with providers who are familiar with their child's care and are then in a situation that they must establish new relationships with new providers and services.

The Exceptional Family Member Program (EFMP)¹² is one example of a military specific program for all active duty service members providing personnel function and a family support function. The EFMP personnel function is a mandatory program for all active duty service members and is standard across all services. The purpose is to identify military personnel who have a family member with special medical and/or educational needs, document the services they require and consider those needs during the personnel assignment process. This function involves the personnel and medical commands and the Department of Defense educational

¹¹ Melnyk and Alpert-Gillis, 1998

¹² EFMP description obtained from Military HOMEFRONT, a web based resource described as the central, trusted, up to date source for service members and their families to find information about all DoD quality of life programs and services.

system overseas. Unlike the personnel function, the EFMP family support function is not mandatory. The Department of Defense (DoD) allows, but does not require, the Military Services to offer family support services to exceptional family members. Consequently, this practice differs from service branch to service branch. In the Army and the Marine Corps, family centers are staffed with individuals whose responsibility is to provide support to families with exceptional family members. They are called [EFMP Coordinators](#). In the Navy, the EFMP staff who support the Personnel Function may also provide family support services, but the Navy does not staff their family centers with EFMP Coordinators. In the Air Force, the Special Needs staff are located in the Military Treatment Facility (MTF) only. The EFMP Re-Assignments Branch is a personnel function. Family Support Center staff provides Family Life Education, Information and Referral and Personal Finance Management services but do not have a designated Coordinator.

A recurring theme in the literature is that parents express the significance of maintaining the role of decision-maker and be seen as pivotal in the effort to locate and use resources to benefit their children with life threatening conditions. Indeed, parents themselves express that among their primary concerns is the perceived loss of the parental role.¹³ Yet, as health care systems grow more complex and difficult for parents and professionals to navigate, professionals are being asked to be accountable for assisting in more direct ways and they are expected to respond more effectively to the needs of families in ways that respect parental choices and decisions. To make the relationship between the family and the helping professional work on behalf of the child, open and honest communication between families and professionals,

¹³ Melnyk and Alpert-Gillis, 1998

including health care providers and ancillary personnel is essential. This is especially the case when families are confronted with disappointing results, unexpected outcomes, uncertainties about their children's conditions and controversies about the direction to take on their behalf¹⁴

Resource Analysis in the National Capital Area

Federal and State Resources

Federal Programs for children are typically categorized under the areas of health, education, income support, mental health and social service. The federal level programs are complex, and therefore the tables contained in this document include only selected information that has been deemed relevant to children with life threatening conditions. Eligibility criteria can be very detailed and in many situations is defined broadly by federal statute, but with more detailed criteria determined by each state. Federal programs are subject to availability of funding and may change based on proposed shifts to block grants or issues of national priority.

An important factor regarding federal level programs is that many are administered at a state level. Administration of a federal program at a state level allows the state to customize the program based on each state's perceived needs and populations. As a result, these programs often have varying eligibility criteria as well as varying allowances for participation and benefits. Thus, a family may qualify for a program in one state, however if the family is relocated by request of the military, there is no guarantee that they will qualify in the other state for a similar program. This phenomenon coupled with complex or generic program descriptions and lengthy application processes may create a gap or disruption in services for children who have very complex medical situations.

¹⁴ Gilmer, 2002

Refer to the *Resource Description Table* (Appendix A) for further detail regarding federal, state and local community programs relevant to children with life threatening conditions. The table provides descriptions of the program types and resources provided through each specific program.

The Medicaid Program can be a significant source of support for some families who have children with special healthcare needs and meet qualifying criteria for the program. Although the Federal government establishes general guidelines for the Medicaid Program, each state establishes program requirements. The Medicaid Program provides medical benefits to low income people who have no medical insurance or inadequate medical insurance. Medicaid is the nation's largest health care program, providing health and long-term care services to 53 million low- income pregnant women, children, individuals with disabilities, and seniors. Whether or not a person is eligible for Medicaid will depend on the State where he or she lives. States are required to include certain types of individuals or eligibility groups under their Medicaid plans and they have the option to include others. The states' eligibility groups are considered to fit one of the following categories: categorically needy, medically needy, or special groups.¹⁵

In addition to the Medicaid program, states have a health insurance program for children up to age 19, State Children's Health Insurance Program (SCHIP). These programs are for children whose parents have too much money to be categorically eligible for Medicaid, but not enough to buy private insurance. Most states offer this insurance coverage to children in families' whose income is at or below 200% of poverty level. However, states have different eligibility requirements. Not all the insurance programs provide the same benefits, but they all

¹⁵ For further information regarding specific state Medicaid eligibility see <http://www.cms.hhs.gov/Medicaid/eligibility>

include immunizations and care for healthy babies and children at no cost. Families may have to pay a premium or a co-payment for other services depending on their income.¹⁶ The SCHIP Program may not be a relevant resource for military families if the child already has access to Tricare.

Medicaid is a vital health care safety net and provides important services to those who cannot obtain care from any other source. Medicaid coverage is also critical for reducing the number of the uninsured currently estimated at 45 million nationwide. Medicaid spending, however, has increased dramatically over the last 5 years, driven by a 40 percent increase in caseload and a 4.5 percent per year increase in the health care price index, strengthening the impetus for reform. According to the National Governors Association Preliminary Report dated June 15, 2005, comprehensive Medicaid reform may focus on reforming Medicaid and on strengthening other forms of health insurance and long-term care coverage.

This potential for Medicaid reform may have implications for states designing home and community based waivers such as the CHI/PACC™ models. Home and community based services are reported to be under fiscal crisis as Medicaid long term care expenditures are projected to increase. Some are concerned that the fiscal crisis may impede the growth of Home and Community Based Waiver Programs. In addition, in states where state waiver programs exist, there are long waiting lists for the programs.¹⁷ Of eight states identified in a Kaiser funded study, a wait time for the home and community based waiver programs range from unknown to 31 months.

¹⁶ Dept. of health and Human Services, Centers for Medicare and Medicaid Services and Center for Medicaid and State Operations, Medicaid at a Glance 2003, A Medicaid Information Source.

¹⁷ Information presented at the GSA Annual Meeting in San Diego Nov. 23, 2003 by Martin Kitchener PHD MBA and Charlene Harrington PhD funded by Kaiser Commission on Medicaid and the Uninsured and the The Institute for Disability and Rehabilitation Research (NIDRR)

Children's Hospice International (CHI), with technical assistance from the Centers for Medicare and Medicaid Services (CMS), Congressional Members, and healthcare leaders, developed the CHI/PACC™ programs to overcome existing barriers to appropriate care for children with life-threatening conditions and their families. These state models have applied to CMS to become Medicaid funded programs under the 1915C Medicaid Home and Community based waivers. CHI/PACC™ has received \$3.2 million in federal appropriations for multi-state demonstration programs in Florida, Colorado, Utah, Virginia and additional states. Children's Hospice International has applied for additional appropriations to further CHI PACC models throughout the country in fiscal year 06.¹⁸

Military Resources

Children with life threatening conditions often use a myriad of medical, educational, and community based services to meet their comprehensive and complex needs. Their families, who nurture them at home, must learn to navigate systems on their children's behalf and find that they too experience needs for support as they meet the day to day responsibilities of caring for children with such challenging health concerns. In addition to the specialized health needs of these children, military families experience additional challenges requiring a spectrum of other supports. There exists a multitude of military supported programs aimed at providing resources to help active duty families. Active reserve military are also afforded resources within the military system to support some of the specific needs that military reserve families face.

Military HOMEFRONT is a web portal and described as "the central, trusted, and up-to-date source for Service members and their families to obtain information about all Department of Defense Quality of Life programs and services".¹⁹ A systematic review of the Military

¹⁸ <http://www.chionline.org/programs/>

¹⁹ <http://www.militaryhomefront.dod.mil/>

HOMEFRONT website was conducted. The method used for the evaluation was identifying all topics listed on the site map. These topics were reviewed and rated based on their relevance to children with life threatening conditions. . Generally, these programs identified on this Web site address resources in the areas of transition, educational opportunity, deployment, employment issues for self and spouse, financial management, housing, family support, recreation, etc.

Please refer to Appendix B, *Review of Military HOMEFRONT Web Site* for a listing of the topics and the relevance to the population.

In addition to reviewing Military HOMEFRONT, a site visit to Military One Source was conducted in 2004. Please refer to the Military One Source Report, Appendix C for further analysis of services and recommendations related to a new model design.

Other Resources

Refer to Appendix D *Community Resource Table* to see a listing of resources located in the general community of the National Capital Area. The resources have been categorized by the following topics:

- Associations and Care Organizations
- Hospitals and Health Facilities
- Hospice
- Medical Information Sources
- Government Resources
- Adaptive Technology
- Child Care
- Financial Assistance
- Medical Providers
- Hotlines
- Interpreters and Translation Services
- Mental Health
- Recreation and Camps
- Support Groups
- Transportation
- Respite Care
- Utility Assistance Programs

- Wish Granting Programs
- Special Education Information and Laws
- Home Health Care
- Durable Medical Equipment and Supplies
- Bereavement Services
- Self Esteem
- Adult Day Care
- Hearing/Visually Impaired
- Vocational/Rehabilitation Services
- Caregiver Resources
- Resource Directories
- Case Management Services
- Community Resources
- Pharmacy Programs
- Planning
- Therapeutic Services
- Literature

In addition, an extensive list of web based databases can be accessed to support children with special needs and life threatening conditions. A listing of resource databases identified in the resource review is included as Appendix E, *Web Databases Resource Directory*.

Findings and Experiences from Resource Research

The following is a list of some experiences The Coordinating Center encountered during the exercise to identify resource information. It is plausible that families may encounter similar situations in their efforts to find resource information and should be considered in developing the new model design. These experiences include but are not limited to the following:

- Difficulty obtaining information; no return phone call or contact.
- Unable to obtain information upon initial contact.
- Often transferred to another person
- Preference is to give information directly to consumer as opposed to a surrogate caller
- Home health care contact information changes frequently
- There appears to be much information regarding resources for Children with Cancer or developmental disabilities available for families on the Internet.
- Using the term "*Terminal illness*" as a keyword search often links to services appropriate for individuals with a diagnosis of Cancer rather than other life threatening conditions.
- Chapters and Associations were identified as local resources when researching specific areas in Maryland.

- Difficulty distinguishing between which category to place resource
- May find numerous programs under one agency.
- Organizations such as the Department of Social Services and Developmental Disability Administration may have different practices based on region of location within the state
- When using the Internet there appears to be very few resources that are military specific.
- Military resources are difficult to locate through civilian research.
- There appears to be inconsistencies in the resources located on military bases and those identified through the national web site.
- Military resources differ from base to base and service branch
- It is often difficult to identify the cost for the services from the information provided
- When calling an organization for resource information, you are often referred to the web site rather than providing the information over the telephone.
- Web site information is often generic and does not include the specific detail regarding the service
- Resources may be for those children and families that are already enrolled within the health care system such as Johns Hopkins - Harriet Lane Compassionate Care Program
- County libraries are available to assist in locating local community resources.
- Health care databases are located at the local libraries for public use.
- Librarians can be used to research specific questions or topics.
- Schools, camps, senior center, etc. provide the library with information related to upcoming events and general information.
- Grass root resources are more readily found through the local library rather than the Internet.
- Networking between county libraries is available
- Disease based associations can offer education and direct families toward other resources related to the diagnosis.
- Community Resource as a keyword search is too broad and yields an unmanageable number of responses
- Utilization of the search word "hospice" or "terminal" yields only end of life services and does not capture resources that may support the chronicity of palliative care patterns.
- Health Science Library results yield little as to specific resources and application for service information that could be helpful to families searching for specific service delivery
- There is an abundance of information available on the Internet attributing to results that are unmanageable due to over abundance of information that is time consuming to sort through
- Internet search results are limited by search words entered and may create barriers to families seeking information
- Web sites that identify specific services and information vary on the elements of information provided
- Some web sites do not indicate how current the information is and do not provide complete information about the resource such as funding for the service or the application process
- Website searches provided voluminous amounts of information and broader variety of possible resources
- Local public library provides assistance with searches by librarian and does not require individual to have Internet search skills or access to technology to gather basic information.
- Some local public libraries have prepared information that can be accessed on county specific services and programs as well as information on some federal programs.

- Military library at Ft. Meade provided limited information on resources in the community and referred to the local public library system
- Reliability of information received is inconsistent
- Directory on Disk is a product available at a reasonable cost to communities as a pre-designed database containing information on social assistance and tailored to the specific community. However, this is not currently available in all communities throughout the country.
- The Internet has become one of the most widely used communication media.
- The Health On the Net Foundation has elaborated the Code of Conduct to help standardize the reliability of medical and health information available on the World

Process Analysis

Locating basic information regarding a resource is typically the first step toward accessing that resource. However, the information may not be useful unless it yields actual access to the needed service. An analysis of the typical process used by an individual to access some type of a resource has been documented in the form of a data flow diagram. See Appendix F for *Data Flow Diagram*. The purpose of this is to identify possible areas of vulnerability that may preclude completion of the process to the point of service delivery. The analysis should be considered while developing the new model of care for children in the military who have life threatening conditions with attention to incorporate quality measures in the process to minimize the potential for unsuccessful service delivery.

For any typical request for resources, a professional, nonprofessional or family member may identify a need for a community resource. Then, there is some research done to identify a source for such resource to yield potential resource options to meet the resource request. This research can be done by the requestor or by another third party, such as a professional or nonprofessional invested in supporting the request. In most situations, there is some referral or application process required to access the resource. The referral or application process can vary from providing basic demographic information to extensive financial and medical reviews prior

to the approval for the resource requested. Depending on the type of resource requested, some situations will warrant the identification of a provider to deliver the resource. In some situations, further research to locate funding will be necessary prior to service delivery. Subsequent to approval for the resource, identification of the provider if applicable and identification of a funding mechanism the service delivery would occur. In some situations, reimbursement is requested following service delivery and would follow.

The basic tasks identified in this process are:

- Identification of a resource need by family, professional or other nonprofessional
- Research for possible options for desired resource
- Application to obtain resource
- Identification of a service provider
- Locating a funding source
- Delivery of the service
- Reimbursement for the cost of the service or resource

Each task within the process has been analyzed to note vulnerabilities within the process.

Process Task	Vulnerabilities
<i>Request</i> a resource	<ul style="list-style-type: none"> • Miscommunication regarding type of resource requested • Resource requested does not meet the need of the child/family • Lack of knowledge on requestors part related to type of resource needed or what may be available
<i>Research</i> resource options	<ul style="list-style-type: none"> • Resource information obtained is inaccurate or lacks correct contact information • Resource information obtained does not adequately represent what was requested
<i>Apply</i> for resource	<ul style="list-style-type: none"> • Application requires specific information that is not readily available to applicant • Application requires signature from other entity such as physician, or other professional requiring additional steps prior to completion • Application requires multiple estimates for the service requested • Poor or no direction for application completion • Application is denied based on information presented • Application gets lost during process • Application is too complex for family to complete
<i>Identify</i> provider for resource	<ul style="list-style-type: none"> • Provider will not accept reimbursement amount or method • Unable to find a provider • Provider of low quality
<i>Locate</i> funding source	<ul style="list-style-type: none"> • Unable to identify funding for resource • Not medically necessary resource • End of budget year request that will be postponed for funding in the upcoming fiscal year
<i>Deliver</i> resource or service	<ul style="list-style-type: none"> • Resource is never delivered • Resource or service is delivered but is of poor quality
<i>Reimburse</i> for resource or service when applicable	<ul style="list-style-type: none"> • Funding is delayed due to internal processes of funder • Reimbursement is required prior to service delivery • Service provider is not part of network for reimbursement

Case Management / Care Coordination

Case management is defined by the Case Management Society of America (CMSA) as "a collaborative process of assessment, planning, facilitation and advocacy for options and services to meet an individual's health needs through communication and available resources to promote quality, cost-effective outcomes".²⁰ Although third party payers and managed care programs often use the term "case management", others prefer the term "care coordination". Typically case management may include activities such as disease management, benefits management and utilization review, while "care coordination" occurs when an individualized plan of care is

²⁰ Definition obtained from CMSA Standards of Practice, 2002

implemented by a variety of service providers.²¹ Care coordination is often the preferred term used in context of family centeredness as parents play such an integral role in the management of their child's care. Therefore, for the purposes of this report for the Children's Hospice Project, case management will be presented within a conceptual framework best described as child and family centered and the term care coordination seems to better describe this service for children with life threatening conditions.

Care coordination is a service commonly found in some of the state level programs discussed in this report, particularly those serving children with special health care needs. For example, care coordination is a component service provided with early intervention programs, developmental disability programs as well as the community based waivers for children. Care coordination is also identified by Children's Hospice International as a key component of the CHI/PACC™ model.

According to the Massachusetts Consortium for Children with Special Health Care Needs, "care coordination is a central, ongoing component of an effective system of care for children and youth with special health care needs and their families."²² This same concept is widely accepted by the American Academy of Pediatrics based on their support of the medical home concept.²³ The AAP Committee on Children with Disabilities recently concluded that care coordination is an integral component to the efficient management of the multiple complex issues related to caring for children with special health care needs to result in optimal outcomes for children and their families. In addition, based on the needs of children across multiple health and human service systems, care coordination is a process that links children and families to

²¹ Committee on Children with Disabilities, Pediatrics, 1999

²² Care Coordination: Definition and Principles, prepared by the Care Coordination Work Group, Oct 2005

²³ Defined by the AAP, A medical home is an approach to comprehensive primary care, that is accessible, continuous, comprehensive, family centered, coordinated, compassionate, and culturally effective.

services and resources. The care coordination of children with complex health care needs is often not provided by the pediatrician based on lack of time and staff.²⁴

Care coordination activities may offer benefits to families and to providers. Some specific activities that care coordination can provide in relationship to accessing resources may include but is not limited to the following:

- Assess the individual needs of the child and family
- Develop an individualized plan of care for the child incorporating the multidisciplinary team
- Understand the range of available community resources and public benefits
- Identify, locate and monitor community resources to assist the child and family
- Facilitate access to health and other services that support the needs of the child and family
- Optimize resources that are available to the child, while avoiding duplicative or unnecessary services and costs
- Facilitate effective communication between families and providers
- Assist the family to become more effective advocates for their child's needs

Refer to Appendix G for the *Care Coordination Presentation* provided to the Children's Hospice Project Team related to case management and care coordination.

Conclusions

Based on this extensive review of potential resources for children with life threatening conditions, there appears to be an abundance of possible sources of support available to military families living in the National Capital Area. Further analysis of resources compared to the needs

²⁴ Gupta, O'Connor and Quezada-Gomex, Pediatrics 2004

assessment could reveal gaps in existing resources for children and families in the military. These gaps will be further evaluated and ultimately incorporated into a new model design as other components of The Childrens' Hospice Project are completed.

A Resource Profile Chart has been developed to identify types of resources relevant to children with life threatening conditions and the general location of these resources. It is important to note that most organizations and programs that house resources for families have specific factors and guidelines that determine a child and family's eligibility for the specific service. The details of these factors are far too many to include in the chart. The purpose of the chart is to be a general reference to identify some possible options and guidance to families seeking resources. See Appendix H for the *Resource Profile Chart*.

At the beginning of this report, the following questions were identified:

- What types of supports are available to children with life threatening condition and their families?
- Where is information about community resources located?
- What is the process for accessing community resource information?
- What are some of the barriers for families in identifying and finding resource information?
- What strategies can be incorporated in a new model design to optimize access to information about community resources?

Finally, in an effort to answer the questions posed at the beginning, please refer to *Resource Overview Analysis* in Appendix I for an overview of the general conclusions relating to Resources as they relate to the various levels (federal, state, military, local) discussed in this report.

Recommendations for Considerations in New Model Design

Education

- Educate families and providers regarding the types of resources that exist and where they may be located
- Educate families of children with life threatening conditions to utilize existing Military Services such as Military One Source and Military Home front
- Educate Military One Source staff on the variety of specific resources that exist for families who have children with life threatening conditions to enhance dissemination of information to families who are seeking community support

Coordination and Facilitation

- Consider care coordination as a means to assist families in accessing existing resources both in the military and private sectors.
- Develop linkages for families with Military One Source to optimize an Information and Referral role they are currently contracted to deliver to active military personnel
- Encourage the collaboration of existing community programs that provide various types of coordination such as public libraries, Infant and Toddler Programs, school programs, Military One Source, etc. that already exist within the military or civilian world.

System Design

- Design information systems to support the dissemination and access to resource information focused on supporting children with life threatening conditions
- Encourage family networking through such chat forums as Military and Specialized Training of Military Parents (STOMP). This type of networking provides families with experience and information on strategies to problem solve system barriers. A parent may

get information to assist them in navigating systems and accessing services to support their children's needs.

- In a new model design, incorporate quality indicators and metrics to measure usage and access to all possible resources that support families. By optimizing the use of resources within the military system, such as Tricare and Military One Source and supplanting resources that families can access outside of the military system, a full spectrum of services appear to be available to support families. This type of quality review may assist the developing model to better identify potential areas for process improvement especially related to the process for accessing the resource and address some of the areas of vulnerability.

Resource Description Table

Category	Program Types	Program Description	Types of Resource Provided
Federal Level*	Social Security Income (SSI)	Supplemental Security Income (SSI) is a Federal income supplement program funded by general tax revenues. It is designed to help aged, blind, and disabled people, who have little or no income. http://www.ssa.gov/notices/supplemental-security-income/	Financial support (cash) to meet basic needs for food, clothing, and shelter.
	Early Periodic Screening and Diagnostic Testing (EPSDT)	The EPSDT program consist of two mutually supportive, operational components: (1) assuring the availability and accessibility of required health care resources; and (2) helping Medicaid recipients and their parents or guardians effectively use these resources. http://www.cms.hhs.gov/medicaid/epsdt/default.asp	The (EPSDT) service is Medicaid's comprehensive and preventive child health program for individuals under the age of 21. EPSDT was defined by law as part of the Omnibus Budget Reconciliation Act of 1989 (OBRA 89) legislation and includes periodic screening, vision, dental, and hearing services. In addition, requires that any medically necessary health care service listed at section 1905(a) of the Act be provided to an EPSDT recipient even if the service is not available under the State's Medicaid plan to the rest of the Medicaid population.
Federal/ State administered	Developmental Disabilities (ADD)	The Developmental Disabilities Act requires ADD to ensure that people with developmental disabilities and their families receive the services and supports they need and participate in the planning and designing of those services. The DD Act established eight areas of emphasis for ADD programs; Employment, Education, Child Care, Health, Housing, Transportation, Recreation, and Quality Assurance. ADD meets the requirements of the DD Act through the work of its four programs:	State Councils on Developmental Disability pursue systems change in some aspect of service or support availability, design or delivery that promotes positive and meaningful outcomes for individuals with developmental disabilities and their families. Protection and Advocacy (P & A) systems, one in each state, protect the legal and human rights of individuals with developmental disabilities. P&A strategies include legal, administrative, and other remedies; information and referral; investigation of incidents of abuse and neglect; and education of policy-makers. University Centers for Excellence in Developmental Disabilities (UCEDDs) are components of a university system or are public or

<http://www.acf.dhhs.gov/programs/add/Factsheet.html>

not-for-profit entities associated with universities. UCEDDs provide interdisciplinary pre-service preparation of students and fellows, community service activities, and the dissemination of information and research findings.

[Projects of National Significance \(PNS\)](#) is a discretionary program providing ADD with the opportunity to focus funds on emerging areas of concern. This program supports local implementation of practical solutions and provides results and information for possible national replication. PNS also supports technical assistance; research regarding emerging disability issues; conferences and special meetings; and the development of Federal and state policy. Additionally, funding is provided for states to create or expand statewide systems change.

Special Education -
State Grants
Program for
Children with
Disabilities

This is an entitlement program of the U.S. Department of Education, Office of Special Education Program administered by state and local education agencies to ensure that all children with disabilities receive a free, appropriate public education (FAPE).

States must provide free, appropriate public education (FAPE) to children ages 6 to 17. States may choose to provide services to students' ages 18 - 21. To qualify for federal assistance for ages 3 - 5, states must make FAPE available to all children ages 3 - 5 with disabilities.

Services include:

- Preplacement evaluation
- Re-evaluation at least once every three years
- Individualized education program
- Appropriate instruction in the least restrictive environment

Related and supportive services include:

- Audiology
- Psychological services
- Physical therapy
- Occupational therapy
- Transportation
- Speech pathology
- Counseling services

Early Intervention Program for Infants and Toddlers with Disabilities	This is an entitlement program administered by education departments, health departments or other local agencies and co-leads, dependent on state where child resides.	<ul style="list-style-type: none"> • Medical services for diagnostic or evaluation purposes • Social work services <p>The program purpose is to provide a system of comprehensive, multidisciplinary, coordinated services to infants and toddlers age 0 - 3 with disabilities and to their families.</p> <p>Services include:</p> <ul style="list-style-type: none"> • Multidisciplinary evaluation and assessment • Individualized Family Service Plan • Audiology • Family training • Medical services for diagnostic purposes • Nursing services • Nutrition services • Occupational therapy • Physical therapy • Service coordination • Other early intervention services for example, assistive devices, speech therapy)
Medicaid Programs	<p>The Medicaid Program provides medical benefits to low-income people who have no medical insurance or inadequate medical insurance. States are required to include certain types of individuals or eligibility groups under their Medicaid plans and they may include others. States eligibility groups will be considered one of the following: categorically needy, medically needy, or special groups.</p> <p><i>Medicaid At -a-Glance 2003</i></p>	<p>Mandatory State Plan Services include:</p> <ul style="list-style-type: none"> • Inpatient hospital (excludes inpatient institutional mental health) • Outpatient hospital • Laboratory and x-ray • Certified pediatric and family nurse practitioners • Nursing facility services for age 21 and older • EPSDT for under age 21 • Family planning services and supplies • Physician services • Medical and surgical services of a dentist • Home health services for beneficiaries who are entitled to nursing facility services under the state's Medicaid plan

		<p>(intermittent or part-time nursing services provided by home health agency or by a registered nurse when there is no home health agency in the area, home health aides, medical supplies and appliances for use in the home)</p> <ul style="list-style-type: none"> • Nurse mid-wife services • Pregnancy related services and service for other conditions that might complicate pregnancy • 60 day postpartum pregnancy related services <p>See <i>Medicaid Services State Plan Chart</i> for specific types of optional Medicaid State Plan services.</p>
Maternal and Child Health Services Title V of Social Security Act	This is a health program of the U.S. Department of Health and Human Services, Maternal and Child Health Bureau that is administered by the state Maternal and Child Health programs in cooperation with local public health, Medicaid and other public and private providers	<p>The purpose of this program is to provide core public health functions to improve the health of mothers and children. The target population includes children with special health needs, including by not limited to disabilities. Services may include:</p> <ul style="list-style-type: none"> • Comprehensive health and related services for children with special health care needs • Basic health services (preventive screenings, prenatal and postpartum care, delivery, pediatric care, nutrition, immunization, drugs, lab tests, dental • Enabling services such as transportation, case management, home visiting, translation, services, other services.
Foster Care Adoption Assistance	These programs are administered by state public child welfare agencies or departments of social services to assist states in paying maintenance costs for adopted children with special needs and to prevent inappropriate stays in foster care.	<p>Services include:</p> <ul style="list-style-type: none"> • Direct cost of foster care maintenance • Placement • Case planning and review • Training for staff, parents, and private agency staff • Maintenance subsidies for dependent child from time of placement for adoption until age 18 or (21) • Training for staff and adoptive parents

Military

Employment	These programs are administered by state vocational rehabilitation offices and to prepare persons with disabilities to engage in competitive employment and to create and sustain jobs for disabled individuals who require competitive employment. *Although these services are usually implemented at 21 years of age, they should be considered in transition planning from youth to adult services.	Services include: <ul style="list-style-type: none">• Job training, referral, placement, follow up• Surgery, prosthetic and orthotic devices• Assistive devices• Treatment for emotional disorders• Interpreter and reader services• Transportation• Occupational licenses• Tools, equipment, supplies• Counseling• Coordination of services for students transitioning from school to work• Development of employment activities• On-site job coaches• Modification of job/ workplace
• Vocational Rehab		
• Supported Employment		
Legal Rights Protection and Advocacy for Individual Rights	This program is administered through state protection and advocacy agencies to enable persons with disabilities to be a part of everyday community life at school, work and home by protecting their legal and human rights	Services include: <ul style="list-style-type: none">• Provides information and referral• Seeks to end discrimination against persons with disabilities particularly with respect to fair housing and employment issues
TRICARE	TRICARE covers most health care that is medically necessary. But there are special rules or limits on certain types of care. TRICARE provides various levels of coverage such as TRICARE Standard, TRICARE Extra and TRICARE Prime. TRICARE Standard is the basic TRICARE health care program, offering comprehensive health care coverage, for people not enrolled in TRICARE Prime . Active duty service members must take action to enroll in Prime, and many other beneficiaries choose to	<ul style="list-style-type: none">• Funding for specified health care costs as dependent upon type of policy• Case Management under certain conditions• Standard is a fee-for-service plan that gives beneficiaries the option to see any TRICARE-certified/authorized provider (doctor, nurse-practitioner, lab, clinic, etc.). Standard offers the greatest flexibility in choosing a provider, but it will also involve greater out-of-pocket expenses. Beneficiaries may be required to file their own claims.• Standard requires that you satisfy a yearly deductible before TRICARE cost sharing begins, and you will be required to pay

	enroll in Prime also. Standard does not require enrollment.	<p>co-payments or cost shares for outpatient care, medications, and inpatient care.</p> <ul style="list-style-type: none"> • Established provider network for health care providers • TRICARE Standard helps pay most hospital bills for semi-private rooms, meals (including special diets), diagnostic tests, and treatment. It covers medical supplies such as bandages and syringes. And, it helps pay for covered care at some health care centers other than hospitals. • Prime is TRICARE's managed-care option, similar to a civilian HMO (health maintenance organization).
Exceptional Family Member Program	The Military Services use the term Exceptional Family Member Program (EFMP) to refer to two different functions: a personnel function and a family support function.	<p>The EFMP personnel function:</p> <ul style="list-style-type: none"> • Is a mandatory program for all active duty service members. • Is standard across all Services. • Identifies family members with special medical and/or educational needs, • Documents the services they require, and • Considers those needs during the personnel assignment process (especially when approving family members for accompanied travel to overseas locations). • Involves the personnel and medical commands and the Department of Defense educational system overseas. <p>The EFMP family support function:</p> <p>Is not mandatory. DoD policy on family centers allows, but does not require, the Military Services to offer family support services to exceptional family members within the Military Services' family support systems.</p> <p>Differs from Service to Service.</p>
Military HOMEFRONT website	"Military HOMEFRONT is the central, trusted, up-to-date source for Service members and families to obtain information about all Quality of Life programs and services." http://www.militaryhomefront.dod.mil/	Information regarding programs available to military families, Leadership and service providers.

**Disease
Specific**

Military One Source	<p>Military <i>OneSource</i> is a program administered by Ceridian to assist active military members and their families in locating resources and services to meet any needs they may identify.</p>	<p>The primary role for Military <i>OneSource</i> is to provide education and options for potential resource supports.</p>
Based on specific condition of individual	<p>There are hundreds of organizations that exist that provide information and resources for persons who have a specific disease or condition. These are too numerous to list individually. As an example of some of the possible disease or condition specific organizations, the website for the National Organization of Rare Disorders provides a comprehensive list of conditions, some of which are life threatening or may be a co-existing condition for someone with a life threatening condition.</p> <p>http://www.rarediseases.org/programs/links/library</p>	<p>Programs & Services :</p> <p>The following list represents a "Library Of Links" as outlined on the National Organization of Rare diseases as an example of the types of programs and services related to condition related resources.</p> <ul style="list-style-type: none">• NORD's Database of 2,000 Patient Organizations and Government Agencies• NORD Member Organizations (125)• Academic Clinical And/Or Research Centers for Rare Diseases (1)• Cancer Resources (1)• Clinical Trials (3)• Conferences & Presentations (1)• General Health Sites (9)• Genetics For Medical Professionals (2)• Genetics Information (3)• Government Sites (14)• Health Policy Information (1)• Health Privacy Information (3)• International Sites (8)• Laboratory Testing• Medicare/Medicaid Information (8)• National Family Caregivers Month• Newborn Screening (2)• Planning For Children With Special Needs (1)• Resources for People with Disabilities (1)• Umbrella Organizations (23)• Universities/Hospitals (8)• Women's Health (1)

Military *OneSource*

Background Information

On June 17, 2004 an onsite visit was made to the Ceridian office in Plymouth Meeting, Pennsylvania for the purpose of understanding the Military *OneSource* Program available to active military personnel. Military *OneSource* is a program administered by Ceridian to assist active military members and their families in locating resources and services to meet any needs they may identify. The primary role for Military *OneSource* is to provide education and options for potential resource supports.

The site visit included spending the day with Ronald White, Director for Military Program Management and Dan Lafferty, Clinical Supervisor for the program. Mr. White has an extensive background in social work as well as international experience related to information and referral supports. Mr. Lafferty is a licensed social worker with certification as an Employee Assistance Professional with military experience in the Air Force. Both have expert experience in the area of employee benefits.

In addition to providing services for the military, Ceridian serves over 10,000 organizations internationally, which translates to over 10 million employees. This Employee Assistance Program (EAP) benefit has been phased in to the various branches of the military over the past four years and is currently available to the Army, Marine Corps, Air Force and Navy. Mr. White estimates that 2.6 million individuals in the military have access to this benefit. Extensive and active marketing campaigns have been

implemented to ensure awareness of the service as well as information about its use.

Utilization data is tracked and sorted by service branch and reviewed to identify areas for further marketing opportunities for Ceridian.

During the visit, Ceridian personnel emphasize the company's commitment to meeting the needs of the population as it operates an extensive quality assurance program that is evident throughout the facility and through interviews with various personnel.

In an effort to build a collaborative relationship between Military *OneSource* and the project team, Carol Marsiglia led a discussion regarding the *mCare* Project. Juli Lausch prepared an extensive list of questions to be addressed throughout the tour and again at the end of the day. Deona Howard also attended the day. The discussion included an overall description of the project and phases for development of a model of care for children of military families who have life threatening conditions. In addition, use of community and military resources was emphasized to identify areas of potential interface between Ceridian services and needs of the population. Mr. White indicated a willingness to support the project through the use of Ceridian services. The role of the company as it relates to Military *OneSource* is that of referral and education. Therefore, it is important to note that accessing services identified by Ceridian is the responsibility of the military personnel seeking assistance and beyond the scope of service provided by Ceridian.

There are three Ceridian service centers in the United States that serve the military at home and abroad. These offices are located in Plymouth Meeting, PA, Minneapolis, MN and Miami, FL. The Plymouth Meeting and Minneapolis locations are

described as mirror images of each other with Miami specializing in multilingual and multicultural services. All locations have access to a translation service.

Tour of Service Center

Information Technology and Telecommunications

Jo-Anne Mullen, Director and Jerry McDonnell, who are ultimately responsible for the overall security of the data system, presented an overview of the Information Technology and Telecommunications Center. A predictive algorithm is used to process calls to ensure efficiency in answering call volume. The time standard set to respond to a call is 20 seconds with no automated answering system used. The calls are answered by a trained triage specialist who then forwards the calls to the appropriate content specialist. There are over 200 phone numbers used to access the organization's services. International access is available and the organization accepts collect calls.

Mullen and McDonnell described an extensive disaster plan and reported that it is tested regularly. They stated that in the event of a disaster, all calls can be moved to an alternate center through "5 key strokes" and that this is a transparent process to the caller. As part of the disaster plan, a redundancy plan is in effect. All data is replicated at the Minneapolis center allowing consultants at other centers to access all data information necessary for business continuity, as well as storage of backup at an alternate location in Louisville, Kentucky. Backups occur multiple times throughout the day.

In addition to telephone based communications, the service is web based and operates on multiple servers that are reportedly able to handle extremely high volume loads with no evidence of performance problems. Utilization trends are reported to vary

with the Army population, in that 70 % of requests are received via Internet with 30% via telephone. The other military branches are reported to be approximately 80% Internet with 20% telephone requests.

Mr. White indicates that they anticipate greater Army telephone usage over time, similar to other organizational patterns. Generally, utilization reporting is based on service type, location, and demographics such as military grade and family member using the service. Custom reports can be designed and provided upon request.

Fulfillment Center

The Fulfillment Center houses educational materials and publications that are provided to the Ceridian consultants to meet the needs of the individuals making information requests. Information distributed has been developed by or cited from experts in a particular content area. For military specific content, such as items that can be sent overseas, military personnel review the information. For more generic topics, such as coping with stress, only information validated by experts in the field is used. Some publications can be reproduced within the Fulfillment Center and some are purchased for distribution.

Service Delivery/ Research

Masters level consultants handle all calls for Military *OneSource* and the staff is configured into teams. Clinical Supervisors are responsible for Consultant Teams and are to be notified of all situations defined as significant. Examples of these would include such issues as domestic, child or elder abuse, as well as concerns that have legal implications. The Clinical Supervisor is then responsible to ensure that all actions and resources have been provided to the requestor to address the issue. In addition, the

Clinical Supervisor is responsible for reviewing two cases per month for each Consultant on their team as a part of the quality assurance process for services.

Call information such as demographics and requests are documented in the Case Management System, which is a custom developed software system used by the Ceridian staff. The software is an integrated system that communicates with scheduling for tracking purposes, reporting for utilization and communication with Fulfillment area as well as with other members of the service delivery team. During normal business hours, calls are triaged and assigned to Consultant Specialists or Consultant Generalists, dependant upon caller needs. During non-business hours, calls are handled by Consultant Generalists and assigned as necessary to specialists. Calls are accepted 24 hours per day, 7 days per week and 365 days per year. Consultant Specialists are available in the area of adoption, childcare, disability, education and international resources. All other topics are handled by Consultant Generalists. Consultants use an internal database of existing resource information or they send a request to a researcher for more specific information. The researcher also has access to an internal database of resources, as well as an Internet capability search. The researcher can utilize multiple strategies to access information requests. All information for contact is validated by the researcher prior to submission back to the consultant for distribution to the requester. For health specific information, researchers are expected to use web sites that are credible based on their URL including “edu”, “gov” or “org”.

The service center itself is a rather large area of individually divided workspaces separated by low level partitions, each equipped with a desk computer and telephone. The area is remarkably quiet despite the constant communication between requesters of

information and Consultants. Each Consultant wears earphones and therefore no telephone tones are overheard in the work areas.

The service delivery system is currently in the process for accreditation by the Commission on Accreditation.

Quality Management

An emphasis on quality is evident throughout the organization as demonstrated by real time data and quality targets posted throughout the service center. These quality targets include answered calls, average hold time and calls abandoned. Goals that are below target are shown in red while on target goals are green. Diane Opere is a manager in Quality Services. She explained that user feedback is extremely important to the organization and is measured through various modes. There is an Interactive Voice Audit Survey and an online survey offered to all customers. The Interactive Voice Audit System allows the customer to answer survey questions in an anonymous way. The online survey is sent 1 week following intervention by Military *OneSource*. Overall return rates are reported at 25% for telephone audit and 28% electronically. Under certain circumstances, referral options are tagged “do not use” based on responses from consumers. Customer feedback reports are submitted to clinical supervisors on a monthly basis. Ceridian reports that they are currently working with the Military Research Center at Purdue relative to outcome measures. The company is currently attempting to demonstrate outcomes such as time saved and decreased stress in seeking resource information. Next generation outcome work will be geared toward measurement of military readiness and retention. Ceridian is reportedly considered a

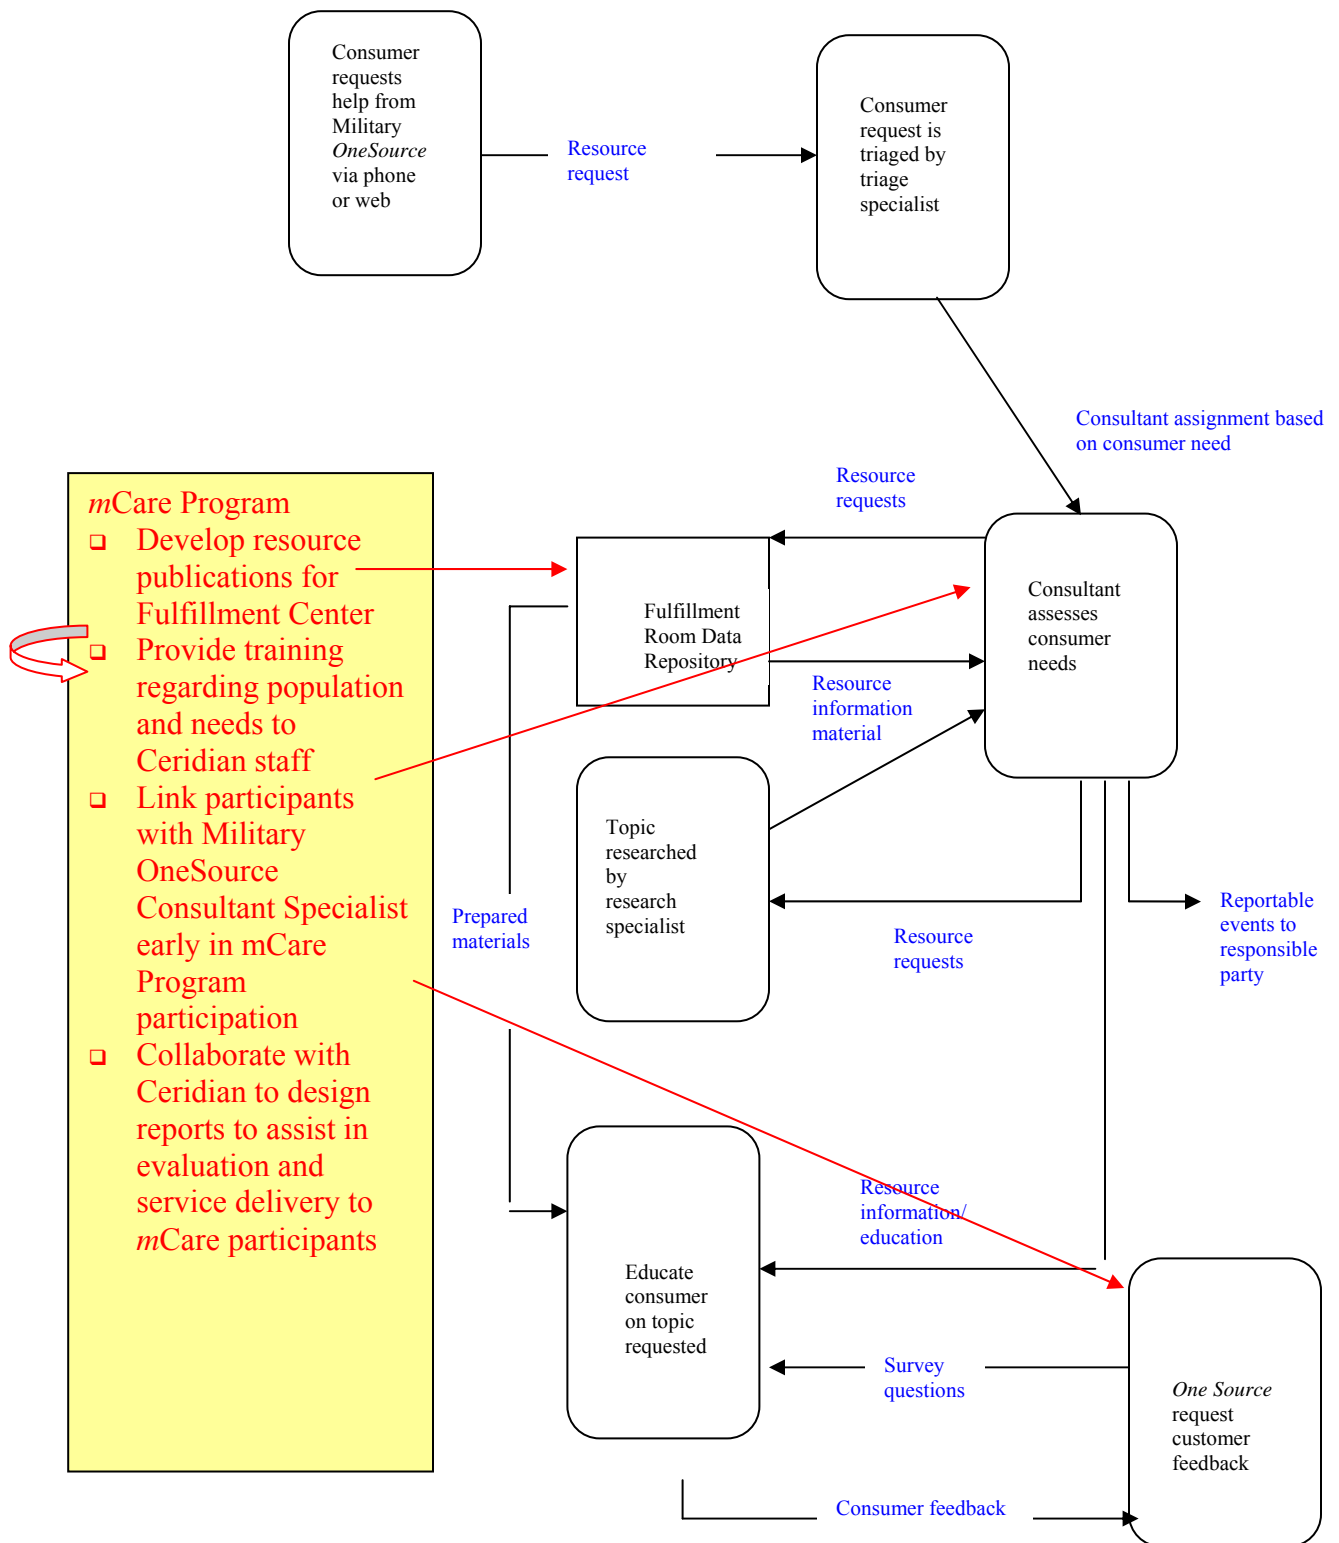

business associate as it relates to the Health Information Accountability and Portability Act (HIPAA).

Recommendations

- Incorporate use of Military *OneSource* Program in future program model to support access to military and community resources as well as general educational information on family related topics.
- Identify information topics that apply to children with life threatening conditions for inclusion in Military *OneSource* databases.
- Collaborate with Ceridian to incorporate publications that target the needs of children with life threatening conditions, specifically including CHI publications relating to palliative care.
- Identify additional resource linkages to Military *OneSource* that are specific to the *mCare* population.
- Offer training for Military *OneSource* Supervisors, Consultants (general and specialist) and researchers regarding *mCare* population.
- Consider reporting needs for *mCare* population and collaborate with Ceridian to submit reports for targeted population.
- Incorporate Health on the Net Code Guidelines related to the distribution of medical and health specific information to ensure credibility and quality.
- Identify any issues related to HIPAA regarding the distribution of resource or health information as it relates to model/program design.

- Educate families participating in *mCare* on the benefits of telephonic mode to promote comprehensive response to the needs request.
- Address the gap regarding accessing services as it relates to the education and resource information role of Military *OneSource* verses more intensive care coordination.
- Develop a means to measure outcomes related to the use of Ceridian services with the *mCare* population.

Examples of these include but are not limited to:</p> <ul style="list-style-type: none"> • Professional providers • Health information • Adaptive technology • Child care services • Translation services • Recreation and camps • Support groups • Transportation • Respite care • Utility assistance programs • Environmental modifications • Caregiver resources • Case management services • Funding sources • Planning information

			<ul style="list-style-type: none"> • Relocation Planning • Federal Programs (Medicare) 		
Where to find information	<ul style="list-style-type: none"> • Internet (SSA website, Military Homefront website) • Local Library • Local SSA office 	<ul style="list-style-type: none"> • Internet (some links on Military Homefront website) • Local Library • Local Departments of Social Services • Local Departments of Education • State offices for Maternal Child Health • Can access information via telephone 	<ul style="list-style-type: none"> • Military OneSource • Military HOMEFRONT website 	<ul style="list-style-type: none"> • Internet • National or regional offices for the condition' • Local Library • Provided by physician or healthcare funder 	<ul style="list-style-type: none"> • Internet • Local Library • Word of Mouth • Family Networks • Local organizations
Process for accessing resource	Must apply at a local SSA office for SSI EPSDT is a set of standards for care and not actually a resource that is provided (one must be eligible for Medicaid for legislative standards to apply)	Varies from state to state Some state programs such as Medicaid Waivers have existing waiting lists prior to accessing services. Families may need to meet a financial and or medical eligibility requirement. Some state waivers require a cost neutrality factor.	Process for accessing each program or support varies based upon service desired. However, active military can use Military One Source as an Employee Assistance Program benefit to assist in facilitating programs and resources.	Correspondence Application process - varies across organizations May require physician documentation of specific condition	Formal and informal application processes varies across sponsoring organization Sometimes requires documentation from a healthcare provider or other entity
Barriers for families in identifying and finding resource	Application process May require physician documentation Locations of local offices Lack of knowledge regarding potential resource Income level too high Application process requires persistence and may require multiple appeals for award	Application process Varying eligibility requirements (financial, medical, geographic) Some Medicaid programs for special groups have limited slots and lengthy waits for services Lack of knowledge regarding potential resource Information found on websites is global and family may not realize they do not qualify until they have already gone through the process.	Service availability and extent of support may depend on the individual's status within the military. Some qualifiers include active vs. retired status, reserves or branch of service.	Application process Acceptable documentation of condition particularly if diagnosis is unclear Lack of knowledge regarding potential resource	Application process Lack of knowledge regarding potential resource Documentation from healthcare provider Applicant may not meet specific target criteria for accessing the service (ex. geographic, age, culture, religious affiliation, etc.)

		State programs vary from state to state in regards to eligibility, benefits and service delivery			
Strategies that can be incorporated in a new model design to optimize use of resources	Educate families regarding the potential resource Assist families in facilitation of application process and identification of local SSA office Educate families regarding appeal process	Educate families regarding the potential resource Assist families in facilitation of application process and identification of local state offices Educate families regarding appeal process	Encourage the use of Military One Source and develop relationships between family and a coordinator from One Source. See Military One Source Report for more specific recommendations) Encourage families to participate on family networking forums (i.e. STOMP or discussion forum through Military HOMEFRONT) to encourage dialogue regarding experiences of what works and doesn't work when working with systems to access services. Families who have experience working through various systems may be willing to share their knowledge to assist other families in similar situations.	Access to information related to condition specific resource centers Education for families related to how to identify resource opportunities	Access to information related to local resources. Education for families related to how to identify resource opportunities within their local community

Case Management
Care Management
Care Coordination

A Matter of Perspective

Prepared by,
The Coordinating Center
August 10, 2005

Otherwise known as.....

- Case management
- Care management
- Benefits management
- Utilization review management (UR)
- Case worker
- Care coordination*

Definition

- Case management is a collaborative process of assessment, planning, facilitation and advocacy for options and services to meet an individual's health needs through communication and available resources to promote quality, cost-effective outcomes

*CMSA Standards of Practice for
Case Management, 2002*

Setting Industry Standards

- Commission for Case Management Certification (CCM)
- Certification of Disability Management Specialists (CDMS)
- Commission on Rehabilitation Counselor Certification (CRCC)
- National Association of Social Workers (NASW)
- CMSA (Case Management Society of America)
 - Local and National organization for case managers
- URAC
 - Set standards for organizational level accreditation in the following areas
 - HIPAA certification
 - Case Management
 - Claims Processing
 - Consumer Directed Health
 - Core Accreditation
 - Credentials Verification Organization (CVO)
 - Disease Management
 - Health Call Center
 - Health Network
 - Health Plan
 - Health Provider Credentialing
 - Health Utilization Management
 - Health Web Site
 - HIPAA Privacy
 - HIPAA Security
 - Independent Review
 - Workers' Compensation Utilization Management

About URAC

- Nonprofit, independent organization, is well known as a leader in promoting health care quality through certification and accreditation programs.
- Offers a range of quality benchmarking programs and services
- Ensures that all stakeholders are represented in establishing meaningful quality measures for the entire healthcare industry

URAC website

<http://www.urac.org/>

URAC Core Standard's address

- Organizational framework
- Information system
- Delegation
- Qualifications, licensure, scope of practice
- Policies and procedures
- Quality program
- Consents
- And more.....

*Standards at a Glance, Accreditation Program
Guide for Case Management Standards,
Version 2.0, URAC 2002*

Settings for Case Management Services

- Hospitals and Integrated Delivery Systems
- Corporations
- Public Insurance
 - Medicaid and Medicare
- Private Insurance
 - Workman's Comp
 - Disability Liability
 - Auto
 - Accident and health
- Managed Care Organizations
- Independent Case Management Companies
- Government Sponsored Programs
 - Military
 - Correctional Facilities
 - Public Health
- Provider agencies
 - Mental health facilities
 - Home health
 - Ambulatory and Day Care
 - Geriatric services
 - Long term care services
 - Hospice
 - Physician practices
 - Disease management companies

Functions of Case Management

- Assessment
- Planning
- Facilitation
- Advocacy

*CMSA Standards of Practice for
Case Management, 2002*

Assessment

- Case identification (screening)
- The gathering of relevant, comprehensive information from the healthcare team and other appropriate individuals

*CMSA Standards of Practice for
Case Management, 2002*

Planning

- Develop a Plan of Care in conjunction with the individual, family and other healthcare team members
- The goal is to develop an appropriate and fiscally responsible plan to enhance quality, access, and cost-effective outcomes.
- Goal setting
- Contingency plan in the event of health or service complications
- CM should initiate modifications to adapt to changes over time and settings

Facilitation

- CM should actively promote, coordinate, communicate and collaborate on behalf of the individual/ family, PCP, members of the health care team, the payer and others such as legal, educational and spiritual communities
- Reconcile differing points of view to ensure wishes of child/ family are understood
- Facilitate education and prevent risks behaviors to promote optimal wellness

Advocacy

- Respect beliefs, value system, and decisions of the child/family
- Incorporate self determination
- Support and educate the child/family to achieve self advocacy whenever possible

Models for Medical Case Management

*Complex Care Management
Paradigm Health
Annual Report, 2004*

Population Health Model

- Basically healthy individuals who need routine preventative care and short-term treatment for illnesses or injuries
- Third party payers may use this model to minimize risk of more serious illness that attributes to higher health care costs

Disease Management Model

- Individuals with troublesome but manageable chronic illness who need ongoing coordinated care to prevent worsening, but who then function well
- Usually an illness that has a higher level of prevalence in the general population and if managed proactively can yield significant reduction in cost of care and in quality of life
- Often identify potential participants through claims review process.

Individual Model

- Individuals with serious, possibly life threatening chronic conditions who need continuous care, pain and symptom management, advance care planning, assistance with ADL's, suitable housing, and whose family caregivers need additional support.

Social Model

- Often referred to as "case worker"
- May be seen most often in Social Services arena, criminal justice, and educational system
- Often used in the Developmental Disabilities World and sometimes referred to as "service coordination"
- Less emphasis placed on certification and/or professional licensure

The Care Coordination Perspective

- Care Coordination implies a partnership with the person/family and is based in person/family centered philosophy and practice
- It is based on a key concept that health is only one component of the process
- It relies on the idea that planning begins with the person; find the resources to meet the person's needs using all community avenues.

2003 Case Management Salary Survey

- Salaries vary based upon geography, setting, caseload and experience
- Salary range from \$39,000 West suburban areas to \$59,000 in the Pacific rural areas

ADVANCE for Providers of Post-Acute Care

May/ June 2003, p. 51

www.advanceforPAC.com

Caseload and Setting

- Case managers who work in managed care, medical groups or worker's compensation report highest caseloads of greater than 60.
- Lowest caseloads are reported in rehab facilities (22), hospice (23) and business owners (25)

ADVANCE for Providers of Post-Acute Care

May/ June 2003, p. 54

www.advanceforPAC.com

Current Issues in Case Management

- Demonstrating and Improving Outcomes of Case Management
- Consumer Directed Trends
- Chronic Care Management
- Education
- CM/Physician Relationship
- Cultural and Linguistic Competency
- Legal & Ethical Issues
- CM Legislation
- Shifting CM roles and job functions
- Growing need for more CMs

Trends Impacting Case Management

CMSA, 2002

National Conferences Specific to Case Management

- Case Management Society of America (CMSA)
- Medical Case Management Conference (MCMC)

APPENDIX 9

Index to Standards and Documentation for CHI PACC

Required Components: to develop local programs of all inclusive care of children/adolescents who are diagnosed with life threatening conditions and family members

Goal: to expand access to curative and palliative services

CHI PACC Standard	Topic
I. COMPREHENSIVE CARE, INTERDISCIPLINARY TEAM	Creation of a continuum of care integrating provider organizations, community-based organizations, professionals and volunteers into one unified interdisciplinary team, providing any medical nursing, psychosocial or spiritual service needed for the child or family.
A. Access to Care	Children and adolescents eligible for care in the Military Health System diagnosed with life-threatening conditions and the members of their families have ease of access to a comprehensive, coordinated, competent continuum of care in their communities.
B. Family-Centered Care	Care in the Military Health System is consistently child/adolescent oriented and family-centered in its philosophy, values, practices, and operation. Family-centered care seeks to support and enhance the life-experience and its quality for each child/adolescent and their family as defined by their culture, values, beliefs, priorities, circumstances, choices and structure.
C. Ethics	Disperse E1-E7 through other categories.
D. Interdisciplinary Team	Children/adolescents living with life-threatening conditions and the members of their families have a wide range and intensity of ongoing hopes and changing needs requiring care. This complex need for care requires the expertise and competence of many disciplines, perspectives, and skills working together with the family as an integrated, comprehensive, coordinated team to provide effective care.
E. Counseling and Supportive Care	Children and adolescents with life-threatening illnesses and their family members must have access to a comprehensive, coordinated, competent continuum of counseling and supportive services to assist them with the physical, emotional and spiritual issues, interpersonal dynamics and psychosocial dimensions of their expertise.

F. Bereavement Services	Bereavement services are supportive and/or professional services following the child's/adolescent's death for a period of time, with the overall goal of assisting the family members in reintegrating themselves into the communities of which they are a part and to find their long-term support in their communities.
G. Care Coordination	Care coordination is a collaborative process of assessment, planning, facilitation and advocacy for options and services to meet an individual's health needs through communication and available resources to promote quality and cost-effective outcomes.
H. Education for Health Care Providers & Families	
II. CURATIVE/PALLIATIVE CARE SIMULTANEOUS	Integration of curative care with palliative care and community-based supportive services.
A. Goals of Care	The goals of care establish the integrated treatment of the disease or life-threatening condition along with the palliative care plan of care and array of services to be provided. All medical treatment and palliative care goals are developed in collaboration with the child/adolescent and family.
B. Comprehensive Assessment Process	Comprehensive interdisciplinary assessment is used to insure that the goals of care and plan of care are based on needs identified as important to the child/adolescent and family. This assessment process is ongoing as needs, circumstances, and hopes change during the course of care in response to the progression of the child's/adolescent's life-threatening condition and its symptomology.
C. Plan of Care	Plan of Care is a comprehensive document incorporating the individual child/adolescent and family goals and services addressing the medical, nursing, psychosocial, spiritual, educational, emotional, and practical concerns and needs.

D. Symptom Management	
III. CARE FROM POINT OF DIAGNOSIS WITH AN IDENTIFIED CARE COORDINATOR	Establishment of a system of comprehensive care providing a wide range of interdisciplinary services available from the time of diagnosis, onset, or time of referral, through the attainment of cure/remission, the graduation into an adult program of care, or if necessary, the provision of bereavement counseling.
A. Continuity of Care	Define MHS context - capture transition issues.
B. Assignment to Care Coordinator	(replaces "admission process")
C. Research and Evaluation	(include family satisfaction and cost effectiveness here)
D. TRICARE Framework	(replaces "governance and administration")
IV. ADEQUATE AND FLEXIBLE FUNDING	Redistribution of funding in order to increase the range of services available in the community and to ensure that the funds follow the child/family into the most appropriate treatment setting.
